IN RE: TYLENOL : 2:13-md-02436-LS  
(ACETAMINOPHEN) MARKETING, : PHILADELPHIA, PA  
SALES PRACTICES AND :  
PRODUCTS LIABILITY : April 27, 2016  
LITIGATION : 10:11 a.m.

TRANSCRIPT OF IN-PERSON AND TELEPHONE STATUS CONFERENCE  
BEFORE THE HONORABLE LAWRENCE F. STENGEL  
UNITED STATES DISTRICT JUDGE

APPEARANCES:

For the Plaintiffs: LAURENCE S. BERMAN, ESQUIRE  
THE LAW OFFICES OF LEVIN,  
FISHBEIN, SEDRAN & BERMAN  
510 Walnut Street, Suite 500  
Philadelphia, PA 19106  
(215) 592-1500

R. CLAY MILLING, ESQUIRE  
HENRY, SPIEGEL, MILLING, LLP  
Suite 2450  
950 East Paces Ferry Road, NE  
Atlanta, GA 30326  
(404) 832-8000

CHRISTOPHER V. TISI, ESQUIRE  
ASHCRAFT & GEREL, LLP  
1825 K Street, NW, Suite 700  
Washington, D.C. 20006

NUMBER

DESCRIPTION

MARKED

ADMITTED

(None marked.)

1

2 THE COURT: And we have a rather limited  
3 but packed agenda. I think the main event here is  
4 the discussion of the supplemental reports, and so  
5 we'll get to that very shortly.

6 In terms of where we are in New Jersey,  
7 Mr. Berman?

8 MR. BERMAN: Yes, Your Honor. Laurence  
9 Berman for the plaintiffs. I'd like to address two  
10 points first, if I may.

11                   With respect to the New Jersey report,  
12   Mr. Milling will actually give you a supplement  
13   today, as there was a conference call with Judge  
14   Johnson yesterday. I was not available to  
15   participate in that, so he will be able to give you  
16   more up-to-date information about the New Jersey  
17   on-goings.

18 THE COURT: Okay.

19 MR. BERMAN: The second point I wanted  
20 to make -- and I'm not quite sure how -- how to make  
21 it -- is that the plaintiffs were a bit surprised  
22 about the audio/visual demonstrative display that was  
23 set up for today's presentation.

24 THE COURT: I didn't do it.

25 MR. BERMAN: Well, I -- we were not

1 given any notice about that.

2 THE COURT: Right.

3 MR. BERMAN: And, certainly, if we had  
4 known that that was the intent of the defendants, we  
5 may have chosen to make our presentations in a  
6 different format or a different manner.

7 THE COURT: There's no extra credit for  
8 PowerPoint (indiscernible).

9 MR. BERMAN: And we actually have no  
10 idea what is going to be displayed. We --

11 THE COURT: Right.

12 MR. BERMAN: Your Honor's standing order  
13 has always been, provide courtesy copies of exhibits,  
14 which we're prepared to do, for hand-up and so that  
15 the court can follow.

16 We -- we don't know if this is cuts of  
17 depositions, whether there's video. It's a complete  
18 surprise, Your Honor, and we just feel that we were  
19 entitled to notice and that, you know, perhaps we can  
20 reserve an objection to the manner of presentation  
21 that the defendants choose to make.

22 MR. MILLING: Good morning, Your Honor.

23 THE COURT: Mr. Milling, good morning.

24 MR. MILLING: Clay Milling for the  
25 plaintiff.

1                   As Your Honor, I think, is aware, the  
2 parties are going full bore on multiple issues right  
3 now as it relates to the Taylor (ph) case, which is  
4 set for trial in late May.

5                   We are -- have been working with the  
6 defense on deposition designations because the  
7 Taylor (ph) case involves two claims; failure to warn  
8 is where the Jackson -- and -- and design defect,  
9 while the case last year was just one claim. We're  
10 lining up the deposition of treaters.

11                  We are -- have jury questionnaire due on  
12 the 9th, evidence list due on the 16th. So we're  
13 going as fast as we can on that.

14                  At the same time, the defendants'  
15 motion, as it relates to the Acute Liver Failure  
16 Group, has stretched everyone thin, with depositions  
17 all over the country last week, from the East Coast  
18 to the state of Washington.

19                  Briefing on the Acute Liver Failure  
20 Study Group issue in New Jersey, Your Honor, is due  
21 on May 9th, with only a seven-day reply -- reply  
22 period, and the parties are to be in New Jersey  
23 beginning on May 16th for day-to-day arguments on  
24 pretrials -- issues continuing until they're  
25 completed; jury selection to begin May 23rd.

1           As Mr. Berman mentioned, there was a  
2 call yesterday, a conference call, with Judge --  
3 slash hearing with Judge Johnson. He wanted an  
4 update on our ability to -- to meet the deadlines in  
5 the scheduling order.

6           And then we had considerable discussion  
7 about the Acute Liver Failure Study Group. He is  
8 aware that Your Honor is hearing argument today. He  
9 asked when we thought you would rule, to which we  
10 said we did not know, but that the plaintiffs had  
11 asked for expedited hearing and ruling.

12           And he was asked whether he would like a  
13 copy of the transcript from today, and he said he  
14 would, and he asked us if we could somehow work with  
15 the court reporter to get a thumb drive so that we  
16 can deliver a transcript of today's hearing to Judge  
17 Johnson for his read.

18           He is currently reading the lead  
19 deposition, the plan deposition, the (indiscernible)  
20 deposition, trying to get his hands on the issue, but  
21 he has not seen the motions and, again, would like  
22 the benefit of the oral argument today.

23           So we're going in a lot of different  
24 directions as fast as we can. Thank you, sir.

25           THE COURT: Okay. Thank you,

1 Mr. Milling. We should be able to accommodate the  
2 request for an expedited transcript. I'll have to  
3 look into the thumb drive request.

4 INDISCERNIBLE SPEAKER: (Indiscernible.)

5 THE COURT: Okay. All right.

6 MR. MILLING: And Judge Johnson's pretty  
7 technologically savvy, so I -- I think just a quick  
8 call and figure out how -- how we can get it over  
9 there, no worries.

10 THE COURT: All right. We can do that.

11 All right. From the defendants'  
12 perspective, Ms. Jones?

13 MS. JONES: Yes, Your Honor.

14 THE COURT: Good morning.

15 MS. JONES: Good morning. Ms. Jones.

16 The -- the -- I do not have anything --  
17 additional comment. I think that Mr. Milling  
18 accurately reflected what's been going on in  
19 New Jersey.

20 There has been a significant amount of  
21 information or documents transferred between both  
22 courts, and so I want to -- we want to be sure that  
23 we give Your Honor what he wants as well as what  
24 we're doing in New Jersey as well.

25 So, for example, the -- Judge Johnson

1 does have copies of all of the briefing that's been  
2 made in this court in the MDL.

3 One of the things that Judge Johnson has  
4 been provided that the plaintiffs have actually been  
5 providing to him in realtime are transcripts of all  
6 the depositions as they've been taken.

7 So we -- we have copies of those, to the  
8 extent that Your Honor would want those or want to be  
9 furnished those. And so I just want to make sure  
10 that all of the information is being shared to the  
11 extent the court wants it.

12 THE COURT: Okay.

13 MR. MILLING: Lastly, just in terms of  
14 coordination, Judge Johnson was -- has also been  
15 provided Your Honor's rulings on motions in limine.  
16 (Indiscernible) were helpful.

17 And so we -- as Alyson mentioned, we are  
18 trying to keep both Your Honor and Judge Johnson in  
19 the loop, given where everything seems to be with the  
20 litigation generally.

21 THE COURT: All right.

22 MR. BERMAN: I just want to add, Your  
23 Honor, you were previously provided with Judge  
24 Johnson's scheduling order. I think it was the order  
25 that was dated January 29th. And that's the order

1 that provided that the Kemp motions, which is similar  
2 to Daubert, would not be filed until the depositions  
3 were completed. So what he has been provided with  
4 has been the courtesy copies of the filings in this  
5 court.

6 THE COURT: Okay. Thank you.

7 MR. BERMAN: Thank you.

8 - - -

9 (Pause)

10 - - -

11 THE COURT: Okay. Why don't we talk  
12 about the supplemental reports. Who's going to argue  
13 that for the defendant?

14 MS. JONES: Yes, Your Honor. David  
15 Cohen from our office is going to argue on behalf of  
16 the defendants.

17 THE COURT: And are you responsible for  
18 all this equipment, Mr. Cohen?

19 MR. COHEN: I am the guilty party, Your  
20 Honor.

21 THE COURT: Okay.

22 MR. COHEN: Guilty -- we -- we had  
23 presented an argument to Judge Johnson in September  
24 on the Kemp motion, and we used audio/visual, and  
25 there was no objection at that time.

1 THE COURT: Okay.

2 MR. COHEN: We did not, for this  
3 purpose, Your Honor, use any video because of the  
4 time frame involved from the depositions. So the  
5 purpose of the -- of the visual -- we haven't used --  
6 we're not using videotapes. The purpose of the  
7 presentation of the visual was to, essentially, be  
8 more efficient since there has been such a mountain  
9 of evidence that has been produced in such a short  
10 period of time and we have a short period of time  
11 today to argue. So if I may?

12 THE COURT: Thank you. Now, in terms of  
13 our schedule, I have a sentencing that was scheduled  
14 at 2:00. I have a -- a commitment at 12:30. So  
15 we'll -- we'll take about an hour on each side to --  
16 to get this done.

17 Mr. Tisi?

18 MR. TISI: Judge, may I approach the  
19 bench with -- with -- with Ms. -- with Ms. Jones for  
20 a moment?

21 THE COURT: Sure.

22 - - -

23 (Whereupon, a sidebar conference was had  
24 between 10:19 a.m. and 10:21 a.m.)

25 - - -

1 THE COURT: All right. Mr. Cohen.

2 MR. COHEN: Thank you, Your Honor.

3 The 19 so-called low-dose cases  
4 published by the Acute Liver Failure Study Group in  
5 the Larson 2005 paper, in our view, cannot reliably  
6 support an opinion -- an expert opinion that 4 grams  
7 or less of acetaminophen per day causes acute liver  
8 failure.

9 I'd first like to start by posing a few  
10 questions and trying then to answer them with  
11 reference to actual documents in evidence, which I  
12 hope will assist this court in making an assessment  
13 of the underlying reliability of this evidence as  
14 part of its gatekeeping role under Federal Rule of  
15 Evidence 702 and Daubert.

16 The questions I would like to pose are  
17 as follows:

18 First, what is the design of the ALFSG  
19 Larson 2005 paper, and can it be used to establish  
20 causation?

21 Second, what is the methodology that was  
22 used to identify the low-dose cases in Larson 2005?

23 And, third, are there flaws in the  
24 methodology that make the low-dose data unreliable  
25 evidence of causation?

1           The plaintiffs' reliance, as the court  
2   is aware, of this evidence is part and parcel of  
3   their core medical causation theory in this MDL;  
4   namely, that recommended doses of acetaminophen  
5   caused plaintiffs' liver injury or liver failure.

6           And to prove this theory, the plaintiffs  
7   and their experts rely upon a single paragraph in the  
8   Larson paper, which is here. This is the abstract,  
9   which is that. And this single paragraph is the  
10   quote, unquote, low dose.

11           And when we refer to "low dose" today,  
12   Your Honor, I'm referring to the way in which the  
13   ALFSG in the paper defined "low dose," which is at or  
14   under 4 grams of acetaminophen per day.

15           At the Jackson trial that we had in  
16   New Jersey in September and October of this past  
17   year, the plaintiffs' principal hepatologist,  
18   Dr. Kaplowitz, testified to this data, and virtually  
19   all of the plaintiff experts cite the Larson 2005  
20   paper and the low-dose cases in their reports.

21           Dr. Davern, one of their experts, is a  
22   coauthor of the paper, and he testified at his MDL  
23   deposition that these 19 cases establish causation.

24           And, finally, as Your Honor may recall,  
25   there has been much reference made by plaintiffs to

1 the FDA Working Group report on acetaminophen, and  
2 that report also references the Larson 2005 paper and  
3 the 19 low-dose cases.

4 This litigation sinks or swims on the  
5 claim that 4 grams or less of acetaminophen causes  
6 acute liver failure. That, in turn, relies on the  
7 plaintiff expert opinion testimony on causation,  
8 which, in turn, relies on the evidence in these 19  
9 cases.

10 Plaintiffs' experts cite this article  
11 because it is the only study of acute liver failure  
12 that reports low doses of acetaminophen ingestion and  
13 ALF. They cite to it because it was published by the  
14 ALFSG, which they describe as, and their experts  
15 testify as, the most important study of acute liver  
16 failure in the United States.

17 I'd like to make some preliminary  
18 observations, if I can get this right, before we talk  
19 about the study --

20 Excuse me.

21 Thank you.

22 -- about the context.

23 In 2005, when the study was published,  
24 there were 28 billion doses of acetaminophen  
25 purchased by U.S. consumers. 28 billion with a B.

1 8 billion of those were single ingredient  
2 over-the-counter acetaminophen products. And that's  
3 from the FDA advisory committee.

4 Second, Larson 2005 low-dose cases  
5 essentially stand alone. No other group of  
6 researchers anywhere in the world have claimed to  
7 have discovered this many cases of ALF attributed to  
8 this dose of acetaminophen ingestion.

9 And, third, since 2005, since that one  
10 paragraph was published in Larson, the ALFSG has not  
11 published any follow-up studies on these cases. It  
12 bears reminder that the study itself, the paragraph,  
13 does not discuss specific cases. It does not discuss  
14 how the ALFSG identified and evaluated those cases,  
15 and since 2005, there has been no information  
16 forthcoming from the ALFSG on these 19 cases. McNeil  
17 asked for information but was rebuffed.

18 Now, the first question I'd like to  
19 address is, what is the ALFSG, and is it capable of  
20 establishing that low-dose acetaminophen ingestion  
21 causes ALF?

22 The ALFSG is comprised of a collection  
23 of cases that were collected on case report forms.  
24 We're going to talk a lot today about case report  
25 forms or CRFs.

1                   Here is how Dr. Larson, the lead author  
2 of the paper, when asked by plaintiffs' counsel how  
3 she got the data, responded: The data was collected  
4 on paper case report forms that we had identified  
5 specific things we wanted to track.

6                   So yes, the ALFSG is a series of case  
7 reports, and they are reported -- and they are  
8 described in the ALFSG protocol, known as the Manual  
9 of Operations, as case report forms.

10                  We will actually look at one of those  
11 forms in a little bit, but the point I want to make  
12 here preliminarily is that the -- is that the ALFSG  
13 uses the term "case report" to describe its own data.

14                  Now, Dr. Larson confirmed this, to  
15 confirm the design of the ALFSG, at her deposition,  
16 and -- where she said -- and then there are things  
17 called case series, which are, say, a collection of  
18 case reports? And she said, yes, correct. And the  
19 ALFSG, as a registry, is, essentially, a series of  
20 cases? Correct.

21                  Dr. Larson then confirmed that the ALFSG  
22 does not have a control group. Correct. She said,  
23 it's not designed as a controlled study. And then  
24 she was asked whether it's ever published risk  
25 ratios. Those would be such as odds ratios or

1 relative risks. And she agreed. That's correct; we  
2 are not designed to do that, was her testimony.

3 The ALFSG, therefore, as Dr. Larson  
4 testified at her deposition, was not designed to  
5 answer the question of whether acetaminophen  
6 ingestion of 4 grams per day in divided doses causes  
7 ALF.

8 So the ALFSG, therefore, is not a  
9 clinical trial. It is not an analytical  
10 epidemiological study with a control group. It is  
11 simply a collection of case reports, known as a case  
12 series.

13 So let's turn to the -- specifically to  
14 the Larson 2005 paper. This paper was not designed  
15 specifically by the ALFSG also to answer the question  
16 of whether low doses causes ALF. Dr. Lee conceded  
17 that.

18 Question: And can we agree that  
19 Dr. Larson -- that Larson 2005 was not designed to  
20 answer the question of whether acetaminophen  
21 ingestion of 4 grams per day in divided doses causes  
22 ALF? Dr. Lee responded, that's correct.

23 Dr. Larson said exactly the same thing,  
24 a little bit differently, but let's go through it.

25 And in that protocol, you have in it, in

1 front of you -- there is not a single reference to  
2 low-dose acetaminophen ingestion, is there?

3 And that's the Manual of Operations.

4 Over objection, she answered, that was  
5 not the design of the study.

6 Dr. Lee acknowledges that the paper does  
7 not report a statistically significant association  
8 between acute liver failure and acetaminophen  
9 ingestion of 4 grams or less.

10 He was asked this specific question,  
11 whether there were any risk ratios reporting  
12 statistically significant association between ALF and  
13 low dose ingestion, and he said, it's -- there is  
14 none.

15 Before moving to the low-dose cases  
16 themselves, I'd like to offer two observations about  
17 why the design of the ALFSG is so important to the  
18 question of causality presently before the court.

19 First, case reports and case series  
20 cannot establish causal associations. That's a  
21 well-accepted principle in science and medicine.

22 Second, if Drs. Lee and Larson  
23 themselves believed that the case report data in the  
24 ALFSG and, specifically, in Larson 2005 established a  
25 causal relationship between low-dose ingestion of

1     acetaminophen and ALF, they would have said that.

2                     Instead, let's look briefly at what they  
3     published and have told the scientific community that  
4     acetaminophen -- about acetaminophen ingestion up to  
5     4 grams a day.

6                     And I want to just preface this by  
7     pointing out that the Larson paper, which was  
8     published in 2005, is based upon data collected by  
9     the ALFSG between 1998 and 2003. The article took  
10    two years to write and to publish. So the period of  
11    which they -- when they collected data is 1998 to  
12    2003.

13                    In 2003, Dr. Lee published this with one  
14    of his colleagues, Dr. Schiodt, S-c-h-i-o-d-t. And  
15    in this paper, he -- they -- these two authors wrote,  
16    taken within recommended doses, maximum 4 grams per  
17    day, acetaminophen is a safe drug.

18                    We asked Dr. Lee about that statement at  
19    his deposition, and we asked, does it say that? It  
20    does. Is that what you wrote 13 years ago? Yes.  
21    You stand by that in general? Yes, we all know that  
22    it's a safe drug in general.

23                    We asked him again, do you stand by the  
24    article? I would think it represents our thinking in  
25    2003, yes. And you haven't withdrawn it? No, it's a

1 book chapter.

2                   Actually, it's a series that comes out  
3 either on a monthly or quarterly basis, and so it can  
4 be, of course, annotated and updated.

5                   Dr. Larson also wrote in 2007 an article  
6 on acetaminophen hepatotoxicity. Now, this is, of  
7 course, two years after Larson was published --  
8 Larson 2005 was published.

9                   And in that article, she wrote,  
10 acetaminophen is effective and safe when consumed as  
11 recommended, 1 to 4 grams per day.

12                   We asked Dr. Larson about that. Did you  
13 write that? I did. Do you stand by that? I do,  
14 with some caveats -- which we're going to come back  
15 to. And since this article has been published,  
16 Dr. Larson, have you withdrawn that statement in any  
17 articles you've published since then? No. And is  
18 this article written two years after you -- you  
19 published your 2005 paper? Yes. So at the time, you  
20 knew about the 19 cases of low-dose ingestion? And  
21 she said, yes.

22                   Now, Your Honor, in 2009, Dr. Lee was  
23 invited to the FDA to testify before the advisory  
24 committee on acetaminophen. He was asked many  
25 questions about that during his deposition by

1 plaintiffs' counsel.

2 But he was also asked at that testimony  
3 at the FDA the following question: Is there a  
4 point -- this is a question to Dr. Lee at the FDA  
5 advisory committee. Is there a point where you would  
6 opine that acetaminophen is a safe drug or that you  
7 think would be a reasonable, safe dose for people to  
8 take? And Dr. Lee responded, I guess I'd rather not  
9 be pinned down; that's a tough one.

10 Now, we asked Dr. Lee about that. Is  
11 that what you told the FDA? He said, it looks like  
12 it.

13 Now, in 2013, Dr. Lee made a  
14 presentation at the American Association for the  
15 Study of Liver Disease, known as the AASLD. We've  
16 heard a lot about it. They had an annual meeting, as  
17 they always do. He was invited, and he even was  
18 invited to give a presentation in honor of Hy  
19 Zimmerman, known as the Zimmerman presentation.

20 And during his presentation, he -- he  
21 elected -- I should preface this. He elected to  
22 focus his presentation on acetaminophen. And he  
23 showed a slide, number 21, and at the end of his  
24 presentation -- and his presentation was virtually  
25 all on overdose and the problem of overdose and how

1 to stop overdoses of acetaminophen causing liver  
2 injury, which everybody acknowledges happens.

3 But he said at the end in his slide on  
4 controversies remaining, low-dose ingestions,  
5 question mark, as a controversy remaining.

6 So we asked him about this at his  
7 deposition. And so you see there, so you wrote in  
8 the second bullet point, low-dose ingestions,  
9 question mark? Right, right. Why did you write it  
10 as a controversy? And this is what he said, because  
11 it's still uncertain; as you -- we just discussed a  
12 moment ago, that these -- that we -- we haven't been  
13 able to prove these completely, but there's certainly  
14 evidence in favor of them existing.

15 And he went on -- I'm not  
16 Mr. Finlay (ph). Well, what is a controversy in  
17 medicine, we asked him. It means that people  
18 disagree; they have friendly disagreements. And  
19 there's nothing wrong with that, right? That's  
20 right. For physicians and scientists to disagree  
21 about science? And his answer was, there's  
22 uncertainty.

23 Since collecting the 19 low-dose cases  
24 between 1998 and 2003, this is what Drs. Lee and  
25 Larson have said and published to the medical

1 community.

2 And I submit that if the methodology  
3 used by the ALFSG to identify these 19 cases in a  
4 paragraph in Larson 2005 were reliable and  
5 convincing, I don't know how Dr. Lee could have  
6 published in 2003 an article stating that 4 grams are  
7 safe.

8 I don't know how Dr. Larson could have  
9 published two years later, in -- after the article  
10 was published, in 2007, that 4 grams are safe.

11 I don't know how Dr. Lee would have been  
12 able to tell the advisory committee in 2009, when  
13 asked about a safe dose, that he'd rather not be  
14 pinned down.

15 And I don't know how Dr. Lee would have  
16 told the annual meeting of the AASLD in 2013 that  
17 this is still a controversy, a remaining controversy.

18 Dr. Lee certainly would not have  
19 explained his prior writings and statements in this  
20 proceeding as he did, using the words that -- we  
21 haven't been able to prove these, and there is  
22 uncertainty.

23 Where there is a lack of proof and a  
24 lack of certainty, I submit that there cannot be  
25 scientific reliability about causation.

1 I'd now like to turn to the second  
2 question of the methodology of the ALFSG and,  
3 specifically, Larson 2005. And so, as I mentioned a  
4 moment ago, we're going to look at a case report form  
5 to understand what went wrong.

6 These are the case report forms. This  
7 is page 1. They're used -- they were designed by the  
8 ALFSG. They're designed to enroll patients by the  
9 different study sites into the registry. And  
10 there's -- reminder, that these do not become part of  
11 the patient chart.

12 - - -

13 (Phone ringing.)

14 - - -

15 INDISCERNIBLE SPEAKER: I'm sorry. I  
16 thought it was off.

17 MR. COHEN: After the CRFs are filled  
18 out by the study coordinators or the study  
19 investigators at the different sites, they were  
20 then -- at the time the Larson paper was written,  
21 they were faxed to UTSW in Dallas.

22 A physician reviewed the forms at UTSW.  
23 The physician may have queried the sites for  
24 additional or missing data or resolution of  
25 ambiguities. That's what Dr. Lee said they did in

1 his declaration.

2                   Once the query responses were returned,  
3 if there were any, the data in the CRFs that are  
4 filled out in these forms was then entered into a  
5 computer database.

6                   And it's important to recall what they  
7 said about this. It was entered in a head-down data  
8 entry, which I just now have learned means that  
9 somebody types the data into the database, no  
10 questions asked. It's -- as it comes in, it gets  
11 just put into the database without any questions.

12                   Now, the Manual of Operations that the  
13 ALFSG and Dr. Lee created for the ALFSG emphasized  
14 getting good data and being careful. Here's what he  
15 wrote, as the saying goes, garbage in, garbage out;  
16 the data is only as good in the way in which it is  
17 collected. And at the end of this quote here, he  
18 says, this is vital; nothing will sink this project  
19 like poor data collection.

20                   THE COURT: And who said this?

21                   MR. COHEN: Dr. Lee in the -- in -- in  
22 the Manual of Operations -- I can't say it was  
23 Dr. Lee. The ALFSG Manual of Operations. And the  
24 specific cite for that, Your Honor, is the First  
25 Edition, 1997, page 12.

1                   We can -- we have copies of everything  
2 we can give you, by the way. At any moment you need  
3 a hard copy, we have everything.

4                   There are several key sections for the  
5 court, I think, to understand that are relevant to  
6 the question of the reliability of the acetaminophen  
7 dosing histories in these 19 cases, so let me just  
8 walk you through them very quickly.

9                   Section 13 is the date of onset of  
10 hepatic encephalopathy or coma. This is the -- this  
11 is the -- they have four grades, one through four.  
12 In order to be enrolled in the ALFSG, you had to have  
13 hepatic encephalopathy, which means altered mental  
14 status.

15                   They also tracked risk factors, and one  
16 that they tracked was ETOH, which is alcohol. Also  
17 important.

18                   Another thing in the case -- case report  
19 form is a section called Medications. And here you  
20 can see -- and I meant to highlight it, but I -- I  
21 failed to do it -- that it's -- it's medications last  
22 six months, including toxins, herbs, mushrooms, and  
23 OTC meds. That's anything over the counter, even  
24 vitamins.

25                   And then, finally, in section 18,

1 relating to acetaminophen specifically, they called  
2 this section Acetaminophen Overdose. It bears worth  
3 noting that in the case report form, they never --  
4 they never had a section about low dose. They  
5 assumed it was going to be all overdose. And so they  
6 called this section Acetaminophen Overdose and called  
7 for additional information on that.

8                   And then, finally, they had a section  
9 called Tox Screens, which we'll talk about, and the  
10 acetaminophen level. And that's the blood level of  
11 acetaminophen in patients when they get to the  
12 hospital.

13                   And then the last thing here, which are  
14 blank, of course, since this is a blank form, are --  
15 they provided two comment sections on the two  
16 different parts of the form.

17                   Now, the focus of Larson 2005, as I  
18 mentioned a moment ago, was on acetaminophen  
19 overdose. Of the 275 patients in the paper, 256 were  
20 overdoses. There's only that one paragraph that I  
21 described and showed earlier on page 1368 that  
22 describes these 19 cases.

23                   Dr. Larson was the primary author, and  
24 Dr. Lee verified that the paper was written from a  
25 spreadsheet.

1 Dr. Larson confirmed that the paper  
2 was -- was written from a spreadsheet and,  
3 specifically, the 19 cases.

4 So -- and tell us, Dr. Larson, how did  
5 it come about that these 19 cases were identified?

6 Answer: When we looked at this data, we noted that  
7 there were several cases, 19 -- I think there were  
8 actually a couple more -- that had reported taking  
9 less than 4 grams --

10 And I've highlighted "reported" because  
11 these were reported --

12 -- which was at the time considered the  
13 therapeutic limit, and we just wanted to look at them  
14 and see if they differed from the patients who had  
15 taken more.

16 And then Dr. Larson said -- we -- we  
17 followed up and said, well, you said, when we looked  
18 at this data. And she responded, and looked at all  
19 the doses that we had available; that's when we saw  
20 that there was some cases that fell outside of over  
21 the 4 grams.

22 In other words, she was looking at a  
23 spreadsheet, and here, she -- she confirms that,  
24 which was marked as Exhibit -- as an exhibit to the  
25 deposition. And, in fact, that's what Dr. Lee

1 verified in his declaration of January 30, 2016.

2 So it's important to keep that in mind  
3 because what happened was, she never looked at the  
4 case report forms when she wrote the paper. They  
5 were never even sent to her. And that she confirmed  
6 at her deposition.

7 And as you said earlier today, you  
8 didn't write the paper from the case report forms?  
9 No, they were at the main site --

10 That was in Dallas. She was in  
11 Washington, the state of Washington.

12 -- and questions went to Dr. Lee and  
13 other authors at the site if I had questions in the  
14 database.

15 And she also didn't have a protocol that  
16 was designed to help her confirm the low doses in  
17 these 19 cases. Quote, there was no protocol  
18 specifically for those 19 cases, other than the --  
19 the main protocol, which is the Manual of Operations,  
20 which has nothing about low-dose cases.

21 And, in fact, she confirmed, in the  
22 Manual of Operations, there is nothing about low-dose  
23 acetaminophen ingestion. No protocol, no mention,  
24 nothing. That's their protocol.

25 Dr. -- excuse me. Dr. Davern, who is a

1 plaintiffs' expert in this case, Your Honor, in the  
2 MDL, is a coauthor on this paper. I'm going to  
3 mention him very briefly.

4 He testified at his deposition that he  
5 never saw the low-dose CRFs, never evaluated them,  
6 did nothing to verify the doses, and did not discuss  
7 the low-dose cases with any of the site  
8 investigators, with Dr. Lee, or with Dr. Larson --  
9 that's at his deposition, page 41, line 10 to 42,  
10 line 2 -- that he did not see any written analyses of  
11 these cases, these 19 cases, before they were  
12 published. And he -- and that's at page 42, lines 3  
13 to 21. And he was a coauthor, and he reviewed  
14 drafts, as he testified, of the manuscript.

15 Now, the part of the CRFs that's most  
16 relevant to whether a -- low-dose case information  
17 relating to acetaminophen is, of course, the  
18 acetaminophen information in the form.

19 And Dr. Lee testified that the  
20 credibility of these 19 cases rises and falls on  
21 these low -- on the dosing histories. Well, the  
22 basis for the classification is the credibility of  
23 the dosing history that's in the CRF, correct?

24 Answer, the question is correct as you phrased it.

25 Now, I'd like to turn to the third and

1 final question, which is, are these cases flawed as a  
2 result of the methodology that was used to write this  
3 paragraph in this paper?

4 And as a just quick background, in this  
5 proceeding, Your Honor, over very strenuous  
6 objections made by the plaintiffs and after almost  
7 two years of litigation in Texas, we have discovered  
8 evidence about cases that has never been disclosed  
9 before, not to the FDA, not to the NIH, not to the  
10 editors or peer reviewers of the Journal of  
11 Hepatology, which published the article.

12 We have also now received testimony that  
13 has never been heard by anyone in the scientific  
14 community. Dr. Lee admits publically for the first  
15 time that three of the 19 cases should be withdrawn  
16 as low-dose cases.

17 Here is the first one. And what we've  
18 done here is just X'd out the first two digits of the  
19 CRF number so that we don't have to have anything  
20 sealed, because UTSW requires that that information  
21 not be disclosed without confidentiality -- due to  
22 confidentiality.

23 So this is -- we're going to refer to  
24 them as the last three numbers of the CRF number. So  
25 this is 026. And I have a binder, which plaintiffs'

1 counsel actually prepared. If they don't mind, I'll  
2 just hand it to the court. CRF 026 is at tab 19.  
3 May I approach?

4 THE COURT: Sure.

5 MR. COHEN: Thank you.

6 THE COURT: Thank you.

7 MR. COHEN: And everything I'm going to  
8 show you is on the screen, but I just wanted you to  
9 have it.

10 And you can see here, in the Medications  
11 and in the Acetaminophen Overdose section, what was  
12 written in was, a handful, by the study  
13 investigators, handful of Tylenol. Not, obviously, a  
14 precise dose. Dr. Lee withdrew that case as a low-  
15 dose case.

16 THE COURT: Well, 6 is still a pretty  
17 low dose, isn't it?

18 MR. COHEN: It's 50 percent more than  
19 the maximum therapeutic dose. Sure, it's not 10  
20 grams, but it's not 4 grams, and the criteria for  
21 that paragraph was 4 grams or less.

22 And I will also submit to Your Honor, we  
23 can present evidence, not today, about that case,  
24 which puts that 6-gram dose into substantial  
25 question. But I did not prepare to do that today.

1 And the reason I didn't prepare to go into that case  
2 in very great detail with Your -- with Your Honor is  
3 because Dr. Lee has withdrawn that case from the  
4 publication as a low-dose case.

5 Now, the second case he withdrew is 035,  
6 and here are some of the relevant portions of it.  
7 And that's because the study site investigators on  
8 the CRF had written Macrobid in three different  
9 places -- actually, four. There's a reference to  
10 nitrofurantoin in the Medication section. That's the  
11 same as Macrobid, so in four places.

12 And that is an antibacterial agent known  
13 to cause liver injury and acute liver failure, but it  
14 got in and was published as one of the 19. And Dr.  
15 Lee has concluded that that case should be withdrawn.

16 THE COURT: And he did that, really, on  
17 the basis of that adduct test, right, that was  
18 conducted after the Larson paper?

19 MR. COHEN: He says that the adduct test  
20 may have helped him understand more about these  
21 cases.

22 THE COURT: All right.

23 MR. COHEN: But what he also testified  
24 was that this had an alternative cause, which was in  
25 the CRF, but was not used in 2005 as a basis to

1     exclude it.

2                   THE COURT:   All right.

3                   MR. COHEN:   It was ignored.   And, of  
4     course, as you know, they didn't have adducts in  
5     2005.

6                   THE COURT:   All right.

7                   MR. COHEN:   And we'll talk about adducts  
8     later.

9                   So we're going to look at one more case.  
10    I'm not going to go through the details yet of this  
11    case.   I will in a few minutes.   But this case  
12    involves a very unfortunate, tragic situation of a  
13    35-year-old female, who was drinking substantial  
14    quantities of alcohol, took a Tylenol overdose, as  
15    written in the record, then took d-CON -- now, d-CON  
16    is rat poison -- in a suicide attempt noted in the  
17    CRF and died very tragically.

18                   And she was -- a death note was sent to  
19    the L.A. coroner's office by the medical institution,  
20    signed by a doctor and a second person, indicating  
21    she died of acetaminophen overdose.

22                   And so when we presented all that to  
23    Dr. Lee, when asked, well, given all that data,  
24    classifying this case as somebody who simply took  
25    acetaminophen as directed, he said, I would have to

1 say no.

2 And so we got -- after these three cases  
3 with Dr. Lee in his deposition, we asked this  
4 question. This comes right after this d-CON case.  
5 We call it the d-CON case, just to remind ourselves.  
6 So you withdrew this from that classification,  
7 correct? Question: So we've withdrawn three cases,  
8 right? And his answer was, yes.

9 Now, Dr. Larson, the first author on the  
10 paper and who wrote the paper, withdrew two cases  
11 immediately. Dr. Larson attempted to defend the  
12 d-CON case, case 042, which Dr. Lee had agreed to  
13 withdraw. I will show you this testimony, because  
14 it's an outstanding example of why this paper and  
15 this discussion of 19 cases is methodologically  
16 flawed.

17 Let's look at the case report form 042,  
18 which is at tab 14 of your binder, but you can look  
19 at it on the screen.

20 And here, you can see, in section 13,  
21 that this patient came in with hepatitic coma -- so  
22 she had altered mental status -- and proceeded very  
23 quickly to a very serious state of -- where she  
24 became comatose very quickly.

25 She was drinking 80 grams of alcohol a

1 day for an unknown period of years. 80 grams.

2 The medication list in this CRF for this  
3 patient, Your Honor, is completely blank. There's  
4 not a single acetaminophen product listed, not  
5 Tylenol, not Lortab, not Vicodin, not generic  
6 acetaminophen. We don't know the date last taken.  
7 We don't know the total dose. We don't know  
8 duration. Everything is completely blank in the CRF.

9 The only reference to her dose is in the  
10 Overdose section, where somebody wrote in 1,200 --  
11 1,200 milligrams. That's 1.2 grams. I'll get back  
12 to that.

13 And the acetaminophen level, she had a  
14 level of 120, and -- and -- and that number may not  
15 have relevance in the abstract, but the typical  
16 level -- depends on the -- on the institution -- is  
17 anywhere -- for recommended dosing of acetaminophen,  
18 the maximum level ranges from about 20 to 30. She  
19 was at 120.

20 Her history was given by the father and  
21 the investigator. The treating doctors, the study --  
22 the study investigator for this site who enrolled  
23 this patient, here's what they wrote: 35-year-old  
24 female, Tylenol overdose and d-CON ingestion along  
25 with heavy alcohol use several days prior to a

1 suicide attempt.

2 Dr. Larson --

3 Oh, last part. This is the coroner's  
4 office record -- or the -- the note to the coroner's  
5 office on a coroner's form from the county of  
6 Los Angeles, where you can see acetaminophen overdose  
7 written four times by the doctor and whoever else  
8 submitted that form. Two people signed it.

9 So we asked Dr. Larson. First of all,  
10 she said, well, I wasn't reviewing the CR -- the CRF.  
11 She didn't review all that information we just saw.

12 So we asked her, okay, well, how do  
13 you -- even though you aren't reviewing the  
14 information -- she knew it was 1,200 milligrams  
15 because she had a spreadsheet -- well, how do you  
16 take 1,200 milligrams?

17 And -- and let me just explain that.  
18 Tylenol or acetaminophen comes in 325- and  
19 500-milligram doses. You can't multiply those in  
20 whole tablets in any combination to get to 1,200.  
21 We -- we tried. We did some simple math. It doesn't  
22 work. You have to cut up pills to get to 1,200.

23 Somebody making a suicide attempt, where  
24 the history is being recorded by the father, is  
25 unlikely cutting up pills to commit suicide and get

1 to 1,200 milligrams of acetaminophen.

2 So she -- she admits it's an incorrect  
3 dose.

4 And then, why -- I asked her, why would  
5 the Tylenol overdose referenced in section -- why was  
6 that specific reference, the reference we saw by the  
7 treating doctor, never queried, the reference to  
8 Tylenol overdose? I don't know, because the main  
9 site was the location where all -- where -- where  
10 these were all initially vetted. So you don't know  
11 why this was not queried in 2002? No, I do not know.  
12 Or in 2005 when you wrote the paper? No, I did not  
13 have the case report forms.

14 And then, of course, she knew about the  
15 fact that it says acetaminophen overdose in four  
16 places in the -- in the report of the death to the  
17 L.A. coroner's office. We asked her, do you have any  
18 basis to dispute that? No.

19 And, finally, she said -- we asked her,  
20 you would not present this case today based on the  
21 CRF and the death? She said, it would have been more  
22 carefully queried today than it was 14 years ago.  
23 You're on the causality committee now, right? Yes.  
24 And as a member of that causality committee --  
25 answer, we would have queried it. And you would not

1 today categorize this case of a low-dose case of  
2 acetaminophen causing ALF, correct? Answer: We  
3 would have potentially have called it an unknown  
4 dose.

5 Your Honor, this testimony from  
6 Dr. Larson, I think, highlights and shows the flaws  
7 in the methodology that was used to evaluate and  
8 query or not query the acetaminophen dose information  
9 in the CRFs.

10 Like Dr. Lee, Dr. Larson now believes  
11 that at least three out of these 19 cannot be  
12 classified as ALF from low-dose ingestion of  
13 acetaminophen. That's almost 16 percent error rate.  
14 That's an error rate unacceptable in any field of  
15 science and, specifically, in medicine.

16 Let's look at one more CRF. Let me see.  
17 Hang on, please.

18 - - -

19 (Pause)

20 - - -

21 MR. COHEN: And it's case 008, and it's  
22 at tab 9. Now, Dr. Lee testified that the data in  
23 the CRF for this case do not fulfill criteria for  
24 assigning acetaminophen as the cause of the patient's  
25 ALF.

1                   "Criteria" means -- in the study, to be  
2 assigned acetaminophen, you had to take either more  
3 than 4 grams, you had to have an ALT over a thousand,  
4 or you had to have some level of acetaminophen in  
5 your blood when you came into the hospital. Those  
6 were the attribution criteria for acetaminophen.

7                   Matt, could you show us Lee 299? Do you  
8 have that handy?

9                   Dr. Lee explained that the study's  
10 prespecified criteria for attributing acetaminophen  
11 to that case were waived. Let's see if we can find  
12 it.

13                   And I'm sorry. It may not be here, so  
14 I'm going to read it into the record. That's the  
15 problem with technology.

16                   Ah, here it is. Found it.

17                   Dr. Lee testified --

18                   INDISCERNIBLE SPEAKER: I think I  
19 (indiscernible).

20                   MR. COHEN: Oh, you're right.

21                   THE COURT: Go back one.

22                   MR. COHEN: Yeah, it keeps jumping on  
23 me.

24                   INDISCERNIBLE SPEAKER: Forward.

25 Forward. Forward.

1 MR. COHEN: Yeah, that's it.

2 So he said he waived it, he said. He  
3 waived the criteria. So we said, who waived it?  
4 That would have been me. Where is the waiver  
5 discussed in the CRF? Oh, this was usually a  
6 telephone call from the site. To who? To me, from  
7 the site investigator to me. Is that telephone call  
8 documented in any part of the CRF or any other  
9 documentation you can provide to us today? This was  
10 the first six months of the study being started in  
11 1998. Well, how do you recall this was waived, given  
12 the age of the case? Answer: Because that was a  
13 common practice, I would say, in the beginning; if  
14 they were -- if somebody had the data from the  
15 previous hospitalization and it looked like a good  
16 case, we were eager to get cases in those early days,  
17 and we -- I might have accepted it even though the  
18 labs didn't quite compute.

19 Frankly, Your Honor, I found this  
20 testimony to be astonishing. It clearly shows bias  
21 in methodology. A single person had a -- in an  
22 unblinded fashion simply waived criteria for  
23 assigning acetaminophen, didn't document his waiver,  
24 and never informed the peer reviewers and the readers  
25 of the Journal that this was, quote, a common

1 practice in the early days.

2 When a researcher admits that he's  
3 collected data in violation of his own predetermined  
4 criteria because he's eager to get cases and then  
5 doesn't disclose it, I submit, Your Honor, that is  
6 bias in research and bias in reporting.

7 But don't believe me on that. Here's  
8 Patricia Robuck, who the plaintiffs also have  
9 sponsored as a non-party witness. She was the  
10 program officer at the NIH for the ALFSG, and she  
11 testified about this very issue.

12 Are you aware, in the ALFSG study, if  
13 scientists could unilaterally waive -- decide to  
14 waive qualification requirements and admit a subject  
15 or enrollee? Answer: No one is allowed to do that,  
16 but no, they are not allowed themselves,  
17 individually; that's what being part of a protocol is  
18 all about; you must follow the protocol.

19 Now, Dr. Robuck told us that even if the  
20 waiver in a study was performed, it must be  
21 documented. Let's go back to the question of waiver.  
22 If an individual scientist decided to waive some of  
23 the qualifying criteria, any or all of the qualifying  
24 criteria, you would expect that waiver to be  
25 documented in the record, wouldn't you? Answer:

1 Yes. Question: And it's important that it be  
2 documented, correct? Answer: Yes.

3 Dr. Robuck even said the NIH expects a  
4 lack of bias in research and reporting and the NIH  
5 also expects from its grant recipients, of which the  
6 ALFSG is one -- it is true, a lack of bias in the  
7 reporting? Answer: Yes. A lack of bias in the  
8 researching? Yes.

9 Dr. Lee's waivers, which he testified he  
10 never documented, which he did so commonly in the  
11 early days to get cases, clearly do not conform to  
12 Dr. Robuck's testimony on what the NIH expects from  
13 its researchers.

14 Now, Dr. Larson was asked about this  
15 same CRF, the one in which Dr. Lee unilaterally  
16 waived criteria and didn't document. Now, because he  
17 didn't document it, Dr. Larson didn't know about the  
18 waiver. She didn't know. Therefore, unlike Dr. Lee,  
19 Dr. Larson testified that although this patient was  
20 properly in the ALFSG, because the patient had ALF,  
21 the patient would not properly be included in the  
22 paper.

23 And here's what she said. You have  
24 study criteria for a reason? Yes. And if patients  
25 don't meet those criteria, they should not be in the

1 study? As I said, this would be queried more  
2 carefully -- today more carefully. Question: This  
3 patient should not be in the study? Answer: This  
4 patient is appropriate for the study; this patient  
5 would not be included in the paper. In the paper?  
6 Yes.

7 So -- so Dr. Larson has now conceded  
8 that there are four cases where the -- of the  
9 low-dose cases where the methodology was so flawed  
10 that today she would say they don't belong in the  
11 paper.

12 That is an error rate of over 21  
13 percent. That's not acceptable in medicine or  
14 science. No one -- no one wants his or her doctor to  
15 practice medicine with a 21 percent error rate.

16 I have now shown you four cases that are  
17 so obviously flawed that Dr. Lee, for three of them,  
18 and Dr. Larson, for four of -- four of them, would  
19 not today characterize them as low-dose cases.

20 And plaintiffs have made a lot about the  
21 fact that the FDA and the NIH have reviewed and  
22 approved the methodology of the ALFSG. It's all over  
23 their papers and all over the declarations that were  
24 written for these experts. Yet Dr. Lee tells us that  
25 these CRFs were never provided to the FDA or to the

1 NIH, so these agencies had no reason to know about  
2 this.

3 Okay. You never sent -- this is to  
4 Dr. Lee. You never sent the CRFs for the 19 cases to  
5 the FDA? Answer: Not that I'm aware, no. Question:  
6 And you never sent them to the NIH? No.

7 Your Honor, there's a more grotesque  
8 aberration of science we still need to discuss with  
9 respect --

10 THE COURT: You're going to have to wrap  
11 it up shortly.

12 MR. COHEN: -- to these cases.

13 I will.

14 In June 2009, Dr. Lee told the FDA  
15 advisory committee that the ALFSG was going to  
16 publish Larson 2. All right? And he said that.  
17 Here's the statement from his testimony to the FDA.  
18 You can see Larson 2. That's in June 2009, and  
19 here's the slide that he showed; we plan a Larson 2  
20 paper. Okay?

21 And, in fact, what we found was that  
22 they actually started looking back at the Larson 2005  
23 data in 2009 as part of something they called the  
24 Data Clean Project. And that's an email that  
25 describes -- or that conveys some spreadsheets to

1 Dr. Lee about Project Data Clean.

2 And it takes a little bit of me to  
3 explain this to you, so bear with me, if you will,  
4 and I'll do it as quickly as I can.

5 But Dr. Larson testified that the --  
6 they wanted to make the data as clean as it could be,  
7 presumably for Larson 2.

8 And here is the spreadsheet, 3 --  
9 UTSMC30059. And it has colors, and one of the colors  
10 is gray, and gray means excluded from the study for  
11 some reason.

12 This is a medical student who's going  
13 through the data at Dr. Lee's request and looking and  
14 seeing, how is the data from Larson 2005?

15 And so what he concluded was that case  
16 042, the d-CON case, should be excluded. It was in  
17 gray. And he concluded that another case, 051,  
18 should be excluded. It was in gray.

19 And he concluded in the green, a case,  
20 116, should be re-categorized not as -- not excluded  
21 from the ALFSG or the registry but re-categorized as  
22 an overdose case because of a dosing -- a problem in  
23 the dose -- the day -- the day of the -- the days of  
24 dosing.

25 And then they put together this

1 spreadsheet, which is -- which has a column called  
2 Delete on it. And here, you can see case 042,  
3 (indiscernible) d-CON poisoning, in the Delete  
4 column.

5 And we asked Dr. Larson, what does the  
6 graying indicate in the spreadsheet, and that  
7 spreadsheet has suggested this was excluded. And we  
8 asked Dr. Larson, so according to the spreadsheet,  
9 this was excluded?

10 And this is one of the other cases I  
11 just talked about. I'm going to try to hurry this  
12 along.

13 And she said, yes, it was excluded in  
14 2009. And -- and -- and then we asked Dr. Larson  
15 again what this all meant, and if you go back to this  
16 spreadsheet, does it indicate that this was  
17 reclassified from a low dose to an overdose? That's  
18 the green case that I showed you, 116.

19 And she eventually said -- do you  
20 remember this? I mean, I remember they were doing  
21 it, yes, that they had re- -- reclassified that case  
22 as an overdose.

23 And so we asked her, you were  
24 reevaluating -- the ALFSG was reevaluating the Larson  
25 2005 cases as part of the total second group? Yes, I

1 believe that's true. This is in 2009.

2 And then she said, so let's -- we then  
3 go back to the 042 case, and she says, I'm asking  
4 you -- or I asked you, I'm asking you, in 2009, you  
5 and Dr. Lee and the ALFSG decided that it should be  
6 deleted for Larson 2? And that she -- and she  
7 answers, that would appear what this says.

8 And so, therefore, in 2009 -- this is  
9 case 116. It falls out. That's the 116 case. I'm  
10 just going to hurry this along.

11 So I asked her, don't you think it's  
12 important information to the question of whether or  
13 not these are reliable cases of low-dose ingestion at  
14 4 grams per day or less, this Data Clean, this -- all  
15 these spreadsheets showing this reevaluation? And  
16 she admitted, yes, it's important.

17 But here's the point, Your Honor.  
18 Dr. Larson doesn't mention Project Data Clean in her  
19 declaration. Dr. Lee doesn't mention it in his  
20 declaration. They don't mention that in 2009, they  
21 went through this evaluation process and excluded  
22 cases.

23 And here's how Dr. Larson described it.  
24 So nobody ever learned that these low-dose cases had  
25 been excluded by the ALFSG other than the ALFSG?

1 Answer: This just hasn't been done yet. Question:  
2 In 2009, when the ALFSG decided to delete these two  
3 cases, did you have any conversation with anybody at  
4 the ALFSG about correcting Larson 2005? No. Did you  
5 think about sending an errata or an explanation; hey,  
6 the data has been reanalyzed, and we've excluded five  
7 cases, and two of them were low-dose cases -- because  
8 we went through three others that were not low dose.  
9 No. And that's never been made public until today?

10 Answer: Well, yes, that's probably true. Never told  
11 the FDA? No. Never told the NIH? No.

12 We didn't examine today every single CRF  
13 with Dr. -- we didn't examine at their depositions  
14 every single CRF with Dr. Lee and Dr. Larson. That  
15 would have taken a couple of days. We didn't have a  
16 couple of days. They're non-party witnesses. There  
17 was a lot of resistance to us having time to depose  
18 them, but we deposed them as best we could.

19 And what we now have learned is that we  
20 already have, at a minimum, either 16, up to 21  
21 percent of the -- of the cases being excluded based  
22 upon the methods -- based upon the methods used to  
23 publish these data.

24 And what is important about these flawed  
25 data is exactly what Dr. Robuck has said. Can you

1 point to me any NIH document where NIH says, there's  
2 certain amounts of data that we can accept as flawed?  
3 No. Can you point me to any NIH protocol where they  
4 say, eh, a little bit of data -- bad data is okay?  
5 No. Can you point me to any -- any NIH protocol, any  
6 NIH regulation, any federal regulation which supports  
7 your statement and your testimony earlier that you  
8 said a certain amount of data problems are okay; can  
9 you point me to that? No.

10 And, finally, Dr. Lee wrote to a U.S.  
11 senator in 2006 in connection with a clinical  
12 research study involving a different drug, not  
13 acetaminophen, which was believed to cause liver  
14 injury. Dr. Lee wrote to the U.S. senator about the  
15 company's sponsorship of that study.

16 The company is certainly to blame for a  
17 faulty study, and no one should consider that any  
18 flawed data in a study -- and one should consider  
19 that any flawed data in a study throws out all that  
20 data.

21 In conclusion, Your Honor, science  
22 requires setting up a hypothesis, designing a study  
23 to test it, and testing it. Acetaminophen causing  
24 ALF at low doses was not the design of the ALFSG, and  
25 it was not the design of Larson 2005, as both Dr. Lee

1 and Larson testified.

2           Where a study is not designed to answer  
3 a question of causation, data pulled from that study  
4 cannot be later used to answer that question. This  
5 is not an analytical epidemiological study. That is  
6 not what the ALFSG is all about.

7           But even if we accept that this is the  
8 only valid way of examining acute liver failure and  
9 low-dose acetaminophen, which we dispute, the methods  
10 used here to collect and analyze the data with  
11 respect to the dosing of acetaminophen in these 19  
12 cases was obviously highly flawed.

13           We have seen now several examples that  
14 even the lead principal investigator and the lead  
15 author of the paper have testified that they would  
16 not stand by those cases today as low-dose cases.

17           Dr. Lee's testimony in a short  
18 deposition produced the astonishing admission of a  
19 16 percent error rate, and Dr. Larson admitted to a  
20 21 percent error rate.

21           The FDA didn't know about these cases.  
22 The NIH didn't know. The readers of Hepatology  
23 didn't know. The only people who know are us, and  
24 sometimes flawed studies get past peer review, and  
25 this is one example.

1                   When Dr. Larson wrote in 2006, one  
2   should consider that any flawed data in a study  
3   throws out that data, he was right. That principle  
4   applies here.

5                   Your Honor, there are some additional  
6   issues that I would like to reserve a few minutes of  
7   time to discuss, if I may be permitted, after counsel  
8   for plaintiffs presents.

9                   THE COURT: Let's see how we are with  
10   time.

11                  MR. COHEN: Thank you.

12                  THE COURT: Thank you.

13                  Mr. Tisi.

14                  MR. TISI: Judge, I'd like to, first  
15   off, thank the court for agreeing to hear this on an  
16   expedited basis. It's, obviously, important to the  
17   parties as a practical matter for not only this trial  
18   and the evidence that will come, that we have to  
19   amass for a September trial, but it's also important,  
20   as Mr. Milling pointed out, I think Judge Johnson is  
21   looking, if I can be so bold, to some of the things  
22   that we're doing here.

23                  As I also indicated, we were taken  
24   off -- a little bit off with the PowerPoint  
25   presentation, but I'm going to do the best I can to

1 jump around.

2 I did prepare for Your Honor a binder,  
3 as we -- as has been typically done in the past for  
4 exhibits that we might refer you during the course  
5 of -- of this argument. And with your permission, I  
6 would --

7 THE COURT: Sure.

8 MR. TISI: -- like to hand it to you.

9 THE COURT: Alyssa (ph), you can take  
10 it.

11 Thanks.

12 MR. TISI: The question that we have  
13 before the court is -- is pretty straightforward;  
14 does Daubert require the court to relitigate -- or  
15 allow the court to relitigate, as defendants have  
16 suggested the court do, the validity of a study like  
17 this that has passeded -- passed not only peer review  
18 by the -- by the Journal of Hepatology but, as you  
19 will hear, the National Institute of Health? And  
20 this data has been presented to the -- to the FDA.

21 Specifically, you're going to be asked  
22 whether or not we should wrap 11 cases or 17 cases  
23 into the trial of this single case and whether or not  
24 this is a -- ultimately, in the end of the day, a  
25 collateral issue that doesn't go to the issues in the

1 case.

2 The answer to those questions, I would  
3 submit, is no. The study is reliable for the  
4 proposition for which it is being used and for which  
5 it is being cited. That is three issues.

6 First, that there are, in fact, cases of  
7 low-dose acetaminophen-induced acute liver failure.  
8 Two, there is a narrow margin of safety for  
9 acetaminophen. Three, that all of the cases in this  
10 study, not just the 19, establish this margin of  
11 safety, and the defendant has not challenged the rest  
12 of the study.

13 Importantly, Mr. Cohen has indicated  
14 that this is the only study out there that suggests  
15 that there is a risk at low dose. Of course, this  
16 court has been involved in this case for a long time  
17 and knows that that is not true.

18 For example, the FDA scientists who have  
19 looked at this question in the Working Group document  
20 that Mr. Cohen referred to has indicated that the  
21 Larson results reported in this paragraph are  
22 identical to those reported by the FDA in its own  
23 database.

24 So, for example, if I can point out to  
25 you, in your binder, there is the FDA Working Group

1 document, which the court is familiar with but may  
2 not have focused on this particular paragraph on  
3 paragraph number -- on page number 11, where the FDA  
4 Working Group --

5 And it's -- I have a copy if the  
6 court --

7 THE COURT: Is that in this binder,  
8 Mr. Tisi?

9 MR. TISI: It is in this binder. I  
10 believe it's the fourth tab.

11 THE COURT: The one that says, Working  
12 Group?

13 MR. TISI: Yes, correct.

14 THE COURT: What page?

15 MR. TISI: If you look at page 11 --  
16 it's actually on page 10. It talks about the  
17 recommendation that the dose be lowered to increase  
18 the margin of safety --

19 THE COURT: Right.

20 MR. TISI: -- for acetaminophen. You --  
21 do you see where I am, Your Honor?

22 THE COURT: I do.

23 MR. TISI: Okay. It says, although the  
24 acetaminophen manufacturer asserts that the data do  
25 not support the assertion that repeated

1     supratherapeutic ingestion of less than 10 grams a  
2     day presents a risk of hepatic injury, the EHRs  
3     database -- and that's an FDA database -- and the  
4     database of the Acute Liver Failure Study Group show  
5     that doses closer to 4 grams a day, the current  
6     maximum dose, presents a dose -- a risk in some  
7     individuals.

8                     And if you look at the footnote, it  
9     indicates the EHRs database and the F -- ALFSG  
10    database shows the median daily dose of acetaminophen  
11    was 5 to 7.5 grams a day. And that's the median.  
12    That's the -- that's midpoint. So some below, and  
13    some above.

14                    If you go to the next page, go to -- the  
15    FDA Working Group reiterates that point because  
16    McNeil, again, said what Mr. Cohen said; the case  
17    reports are unreliable evidence for the -- for  
18    determining risk.

19                    And the FDA Working Group says, the FDA  
20    acknowledges the difficulty in defining a safe daily  
21    dose relying on case reports; there are, however, two  
22    different databases that suggest toxicity may occur  
23    in some people with doses close to 4 grams a day.

24                    So the FDA has indicated that this ALFSG  
25    database is reliable because it has been replicated,

1 not only in their database, but elsewhere.

2 I would also point out that there are  
3 clinical trial data that indicates that at 4 grams,  
4 there is an elevated risk of -- of hepatotoxicity.

5 There are other individual cases,  
6 including what the defendant has indicated is not, in  
7 the medical literature and which you will see is  
8 actually in this group of 19 cases, cases where  
9 people were administered acetaminophen in a hospital  
10 setting, in a -- in a situation in which the dose is  
11 considered to be reliable because it's administered  
12 by a doctor, and the person goes on to develop acute  
13 liver failure.

14 So the first thing I would like to say  
15 when we start out is that -- is that this evidence,  
16 as important as it is, does not stand alone, as  
17 Mr. Cohen suggests, but is, in fact, part of a  
18 larger -- a larger spectrum of evidence, from animal  
19 data to clinical trials to epidemiology observations  
20 like this to case reports, that has convinced the  
21 scientific and medical community, except for McNeil,  
22 that there is a narrow therapeutic margin and a risk  
23 at or near 4 grams.

24 Mr. -- before diving into my argument on  
25 this, Mr. Cohen made several startling

1 characterizations of some of the witnesses in this  
2 case. I would start with one to illustrate the point  
3 and the point of using snippets, like Mr. Cohen used,  
4 to illustrate here.

5 If you recall, when -- he indicated that  
6 Dr. Lee had indicated that there -- this is a safe  
7 drug and that there was no risk until you get to  
8 close to 10 grams. There was a 2003 article on that.  
9 There are multiple articles, from 2003 forward, where  
10 Dr. Lee indicated there was a risk at 4 grams.

11 In fact, if you go to your binder -- I  
12 didn't think I was going to have to do this, but if  
13 you go to the binder, under the section -- there's a  
14 section in which I collected testimony from the  
15 various witnesses who have been -- testified in this  
16 case on various issues.

17 And one is on the issue of the risk at  
18 10 grams, and I asked Dr. Lee the following  
19 questions. And it's on page 86 of his deposition.  
20 Before I get to --

21 THE COURT: Where are you in the binder?

22 MR. TISI: It's on the page -- it's in  
23 the binder on number 3, risk at less than 10 grams.

24 THE COURT: Right. Got it.

25 MR. TISI: And I pulled -- there are --

1     there is -- this was actually for another purpose  
2     that I had this binder made, but there are snippets  
3     from the various deposition --

4                     THE COURT: Did you make this for me?

5                     MR. TISI: I did. I did, but it was  
6     a -- I didn't intend to use it, frankly. I intended  
7     to use it, frankly, with -- in another context.

8                     But there is -- there are pieces of  
9     deposition testimony from the various witnesses in  
10    this -- behind this binder. But if you go to the one  
11    that deals with Dr. Lee, page 86, I asked him the  
12    question at line 17: Before I get to discussing the  
13    Larson paper specifically --

14                    And my preface question was, I want to  
15    talk about your public statements, the things you  
16    have published in the past 10 to 15 years on  
17    acetaminophen.

18                    Before I get to discussing the Larson  
19    paper specifically, let me ask you a global question;  
20    in your 20-year work with the federally funded Acute  
21    Liver Failure Study Group, have you developed and  
22    reported an opinion in the medical literature that  
23    some patients with acetaminophen- induced liver  
24    failure can occur at 4 grams or less? Yes. Can it  
25    occur at 5 grams? Yes. Can it occur at 6 grams?

1 Yes. And so forth.

2 And then I asked him the question, on  
3 line 11, if anyone were to say that a human being  
4 cannot develop acute liver failure until they get to  
5 10 grams a day, is that something that would be  
6 consistent with your experience running the largest  
7 acute liver failure registry in the world? No.

8 Are these opinions that you, on behalf  
9 of the Acute Liver Failure Study Group, reported to  
10 the FDA in a public forum? Yes. And I go through  
11 all the opportunities that he had to actually put  
12 that out there.

13 So when Mr. Cohen puts out a 2003  
14 chapter from a medical -- from -- that Dr. Lee wrote  
15 and ignores the rest of his published literature for  
16 the past 15 years, I think you ought to take note of  
17 that.

18 Let me go -- let me take a big picture  
19 here and back up a minute and see where we are and  
20 why we're here a year and a half after we started  
21 filing the various motions in this case discussing  
22 the Acute Liver Failure Study Group.

23 As this court is aware, there are two  
24 big picture questions that deal with the generic  
25 issue, not only in the Taylor (ph) case -- excuse

1 me -- not only in the Hayes (ph) case, but in all of  
2 the cases.

3                   Number one, can acetaminophen cause  
4 acute liver failure at or near 4 grams either above  
5 that dose or below that dose?

6                   Number two, should McNeil have had  
7 knowledge of acetaminophen's narrow therapeutic  
8 margin such that they should have taken risk  
9 reduction measures in the early to mid-2000s,  
10 including, among other things, lowering the dose,  
11 giving better instructions, redesigning the product  
12 to increase the margin of safety?

13                   To answer these two important generic  
14 questions at trial, the plaintiffs rely heavily not  
15 only on the science but on the consensus of the  
16 medical and scientific and regulatory community about  
17 acetaminophen.

18                   As both this court and Judge Johnson has  
19 noted, it is -- it is the consensus of the medical  
20 and scientific community and that McNeil stands  
21 squarely outside of that consensus.

22                   In fact, we quoted in our papers the  
23 numerous times that Judge Johnson has said that there  
24 appears to be a consensus in the medical and  
25 scientific community; McNeil just wasn't part of it.

1                   So that's the background, and so we have  
2   to understand what it is that the defendant is trying  
3   to do here, because the defendant is standing  
4   squarely against the FDA, the FDA Working Group, the  
5   Acute -- the American Association for the Study of  
6   Liver Disease, the American Liver Foundation, the FDA  
7   advisory committee votes, and the Acute Liver Failure  
8   Study Group.

9                   So what are they doing here, and why are  
10   we doing this? Well, they're trying to undo the  
11   decades of consensus. McNeil believes that if they  
12   can attack this single article, which is of this  
13   Acute Liver Failure Study Group, they can illustrate  
14   that the rest of the medical community, the rest of  
15   the scientific community, and the rest of the  
16   regulatory community got it wrong.

17                  In particular, they attack the Larson  
18   study. And that -- I -- I assume you have a copy of  
19   it, so I won't give you another copy of it, but that  
20   article was designed to look at a bunch of things.

21                  It was designed to look at the spectrum  
22   of acetaminophen-induced liver failure seen in the  
23   first six-years of this NIH-funded registry, from  
24   1998 to 2003.

25                  They didn't just study the 19 cases.

1 They studied 275 acetaminophen-induced acute liver  
2 failure cases. And in that study, they reported  
3 about half of the people in the study had attempted  
4 to harm themselves by committing suicide.

5 But the important part of that study is,  
6 about half of those patients were trying to get  
7 better. They were trying to treat themselves, or  
8 their doctors were trying to treat them, for pain.

9 Now, as part of that spectrum -- and --  
10 and that's why it's important to talk about the big  
11 picture here -- they described what they called the  
12 low-dose cases, and those are the 19 cases that --  
13 that Mr. Cohen talked to you about.

14 Now, Mr. Cohen spent a lot of time  
15 talking about how medical histories are unreliable  
16 and that somehow, the medical and scientific  
17 community did not know that there were issues with  
18 respect to the reported dosing history of some of  
19 these cases.

20 Frankly, Your Honor, that's an  
21 astonishing proposition because it's not true. In  
22 the article itself -- and if you go to the article,  
23 the page that Mr. Cohen did not cite for you -- on  
24 page 1370, in the Discussion section of the paper,  
25 they talk about the cases in which people are not

1     trying to commit suicide.

2                 They say, among -- quote, among the  
3     unintentional overdose patients, most reported that  
4     they were taking the medication specifically for pain  
5     and constitutional symptoms.

6                 It goes on to say -- I'm skipping a  
7     couple sentences -- why, then, the sudden onset of  
8     severe liver injury? Our data suggests that there is  
9     a narrow therapeutic margin and that consistent use  
10    of as little as 7.5 grams a day may be hazardous;  
11    however, precise information on dosing is often  
12    difficult to acquire in some of the patients.

13                They told the readers of this article  
14    that there are some patients -- and I say "some"  
15    because, as I will show you, certainly not all --  
16    some patients had difficulty giving and getting a --  
17    a dosing history.

18                It's not -- it's not surprising that  
19    Mr. Cohen would spend his time talking about those  
20    some, but there are many other cases in this 19 in  
21    which the dosing history was reliable, including the  
22    dosing history provided by one of defendants' own  
23    experts, unknown to him when he wrote his report.

24                Dr. Flamm and his medical center  
25    provided a case, 010, in which the patient was

1 described by the -- by the -- by their institution as  
2 having acetaminophen-induced liver failure, and  
3 Dr. Flamm personally confirmed the low dose.

4 So while the defendant has spent a lot  
5 of time talking about how unreliable this is and  
6 picking apart little parts of the paper, not only did  
7 the authors disclose that there was a problem with  
8 some patients, they didn't talk about -- fairly talk  
9 about the -- the breadth of the cases, of the 19  
10 cases.

11 Now, I want to emphasize before I really  
12 get into the argument in this case that this 2005  
13 article is one of the lines of evidence that the FDA,  
14 the ASLD, and the FDA Working Group relied on to  
15 recommend that there be better instructions for  
16 acetaminophen, that the dose be lowered, that the  
17 margin of safety is too small, and that there is a  
18 risk with this problem -- with this drug.

19 Now, to -- to -- having set up where  
20 this argument fits in in the -- in -- in -- in the  
21 spectrum of this case, now I want to turn to what  
22 McNeil's attacks are and how this issue unfolded so  
23 that we're here in early 2016 talking about this  
24 instead of something that happened a long time ago.

25 To support its attack on this peer-

1 reviewed article, McNeil has procedurally collected  
2 all the CRFs for the Larson study. They could have  
3 focused on all of them, but they didn't. They chose  
4 to focus on the 19.

5 THE COURT: Is it a problem with the  
6 methodology that the authors of the report  
7 acknowledge that they didn't look at the CRFs?

8 MR. TISI: No, because this is -- if you  
9 look at the paper, Your Honor, the paper has  
10 something in the range of, I think, 11 authors. Each  
11 of them do a part of the paper.

12 Dr. Lee was involved in actually looking  
13 at the CRFs, and he testified to that. Dr. --  
14 Dr. Larson was -- her job was to take the information  
15 that was in the spreadsheet that was provided as a  
16 result of this process and collate it and -- and --  
17 and write a first draft.

18 The important thing about the  
19 methodology, Your Honor -- and Dr. Robuck testified  
20 to this extensively, and it's in her declaration --  
21 the procedures for collecting and analyzing the data  
22 were not set up by the Acute Liver Failure Study  
23 Group in a vacuum.

24 These were set up in connection with the  
25 National Institutes of Health, which not only

1 approved and reapproved and reapproved the grant for  
2 the -- for the Acute Liver Failure Study Group, but  
3 the practices, including the Manuals for Operation,  
4 including the data collection, including all of  
5 that -- was approved by the F -- by -- by the  
6 National Institutes of Health.

7           They had monthly steering committee  
8 meetings, where -- Dr. Robuck sat in on those  
9 steering committees, and these cases were -- were  
10 presented and discussed, and any issues related to  
11 the conduct of the Acute Liver Failure Study Group  
12 were -- were conducted.

13           They had a once-a-year meeting of all  
14 the investigators. And during the course of this,  
15 any issues related to data collection were -- were --  
16 discussed.

17           She testified that the low-dose cases  
18 were specifically discussed, not only within --  
19 within the -- within the ASLD themselves, but with  
20 the NIH, and they were provided with summaries of  
21 these patients.

22           She took those patients and went back to  
23 what's called a data safety monitoring board, which  
24 is an internal board -- it's described in her  
25 declaration -- with the NIH. Dr. Lee and none of the

1 investigators were part of that.

2           The summaries of these patients were  
3 provided so that any information, any problems with  
4 data collection, with patient safety, with any  
5 conduct of this study over the -- the almost 20 years  
6 it's been -- it's been in effect, would be identified  
7 by the -- by the data safety monitoring board and be  
8 brought back to the Acute Liver Failure Study Group  
9 and corrected.

10           And so while Mr. Cohen has spent a lot  
11 of time taking apart individual cases, the truth of  
12 the matter is, the methodology that was used by the  
13 Acute Liver Failure Study Group was unique to almost  
14 any study that I've been involved with in the years  
15 that I've been doing this, in that it was  
16 scrupulously supervised by the National Institutes of  
17 Health, its procedures were subject to peer review,  
18 its procedures and -- were subject to renewal every  
19 three to five years, and it passed every single time.

20           In fact, Dr. Robuck -- I believe her  
21 last question and answer in her deposition was, have  
22 you ever seen a study that was more meticulously  
23 done, even if there were flaws in various -- as will  
24 inevitably happen in 20 years, that there would be  
25 things missing in forms and those kinds of things,

1 but when you look at the conduct of the study, how  
2 does it compare? And he (sic) said -- both Dr. Lee  
3 and this study were remarkable in -- in their  
4 contribution to the understanding of this -- of this  
5 disease.

6 So to answer your question directly,  
7 Your Honor, there were checks and balances for the  
8 methodology that was employed for this study, the  
9 data collection, the data analysis, and that was  
10 provided by the National Institutes of Health.

11 So what happened in this case -- and  
12 I -- I believe -- returning to my argument, what I  
13 think we have to do is go back to where we were in  
14 January.

15 The defendants produced a report. The  
16 report's from three experts; a Dr. Brown, a  
17 Dr. Flamm, and a Dr. Brent (ph). Importantly, and as  
18 I'll discuss in a moment, none of these three  
19 litigation experts have ever focused their research  
20 activities on acetaminophen, on acute liver failure  
21 related to any drug.

22 They're -- even though two of them were  
23 members of the Acute Liver Failure Study Group,  
24 remember, the Acute Liver Failure Study Group does a  
25 lot of things other than study drugs. That was their

1 focus. They weren't studying acetaminophen.

2 But they come marching into this  
3 courtroom in January with reports that say four  
4 things, and we can't forget those four things because  
5 it calls into question the methodology that they used  
6 to analyze these cases.

7 They said, number one, many of these  
8 cases didn't even have acute liver failure; they had  
9 things like sepsis or shock or some other things;  
10 many of them didn't even have acute liver failure.

11 Number two, they said, well, if they had  
12 acute liver failure, they must have been due to other  
13 things other than acetaminophen. They mentioned  
14 things like hepatitis A. They mentioned things like  
15 alcoholic liver disease or cirrhosis.

16 Number three, they say, well, in the few  
17 cases that were actually acute liver failures --  
18 acute liver failure and in those even fewer cases  
19 that were due to acetaminophen, not one, not a single  
20 one was a case that can qualify as low dose.

21 And they further argue, even though one  
22 of them was listed as a participant in the study and  
23 the other one, in fact, participated in the study,  
24 said the article ought to be retracted and should not  
25 be -- should not have been published in the first

1 place.

2 Now, over the past two months, we have  
3 provided declarations to the court of the following  
4 people so the court understands and the record is  
5 clear as to who they are.

6 William Lee is the private  
7 investigator -- the principal investigator for 20  
8 years for the Acute Liver Failure Study Group and the  
9 holder of the NIH grant and the senior author of the  
10 Larson study. He's authored close to 150 articles on  
11 acute liver failure and acetaminophen toxicity. He  
12 was not retained or paid a dime.

13 Anne Larson was the site investigator  
14 and lead author for the Larson article. She's  
15 published over 30 articles on acetaminophen-induced  
16 liver failure. She has not been paid a dime.

17 Dr. Robuck, the NIH fund official in  
18 charge of the NH- -- Acute Liver Failure Study Group  
19 grant, she was not retained and has not been paid a  
20 dime.

21 I emphasize this to note that these  
22 willing -- that these patients -- that these doctors  
23 were willing to come forward at -- at -- at  
24 tremendous time and on short notice to provide the  
25 declarations that are before the court.

1                   In addition, we provided the reports of  
2 Dr. Kaplowitz, who was the acute -- who is widely  
3 considered one of the nation's authorities on -- in  
4 this area and published a textbook on -- on  
5 drug-induced liver disease; Dr. Davern, who was a  
6 site investigator and author on the -- on the Larson  
7 paper, and two toxicologists.

8                   I go through this because I think you  
9 need to understand -- sometimes I watch on television  
10 people debating issues, and sometimes it is important  
11 to understand where they stand in the medical and  
12 scientific community because not all opinions are  
13 equal.

14                   I have provided in your book as tab 1 a  
15 chart that we put together, and I'd just like to take  
16 a moment and go through them, because I think --  
17 against the backdrop of the argument you just heard,  
18 I think you need to see where these experts line up.

19                   Publications on -- on acetaminophen,  
20 acute liver failure, and drug-induced liver injury,  
21 Dr. Lee, 152 articles; Dr. Kaplowitz, 88; Dr. Davern,  
22 34, Dr. Larson, 36.

23                   Dr. Brown has had six, and Dr. Flamm has  
24 had one. And they go through each of these  
25 article -- each of these on -- reports of acute liver

1 failure, acetaminophen. These are not --  
2 respectfully, while they may be -- while they may be  
3 experts in the fields in which they are -- hepatitis  
4 and other areas, liver transplants, they are not  
5 experts in the field of drug-induced liver disease or  
6 of acetaminophen-induced liver failure.

7 In fact, just to illustrate the point,  
8 Dr. Flamm himself was asked to write -- author a book  
9 on liver disease. Interestingly -- and it's tabbed  
10 in your book -- the person he asked to write the  
11 chapter on drug-induced liver disease was Dr. Davern.

12 So now, what do these qualified experts  
13 and witnesses say? You've heard nothing from  
14 Mr. Cohen about the analysis performed by any of  
15 these witnesses.

16 McNeil's experts failed to consider  
17 important evidence when they drafted their report,  
18 including the presence of acetaminophen adducts that  
19 was subsequently performed on these low-dose cases.  
20 I think Your Honor cued into that in one of the  
21 questions you asked Mr. Cohen.

22 If you turn to the Lee declaration,  
23 page 14 and 15, he describes the importance of  
24 acetaminophen adducts. And I have a copy if Your  
25 Honor needs it. But on pages 14 or -- and 15 --

1 THE COURT: Hang on.

2 MR. TISI: -- he talks about having  
3 received the expert reports of Drs. Brown and  
4 Dr. Flamm and Dr. Brent (ph), and as a scientist, he  
5 was concerned; did I get it wrong?

6 And one of the things he did was go back  
7 and look and see -- you know, we have this new test  
8 that we had done for acetaminophen toxicity; we know  
9 these patients had toxicity -- we know these patients  
10 had acute liver failure; did we, in connection with  
11 another study we had done -- and there were several  
12 studies -- actually test these patients for  
13 acetaminophen adducts? In fact, they had.

14 That would be the first question that  
15 a -- that an expert who was looking at things in an  
16 unbiased fashion would ask. It's the question that I  
17 would have expected Dr. Flamm and Dr. Brown, who were  
18 members at one point of the Acute Liver Failure Study  
19 Group, to have asked; by the way, McNeil, are there  
20 adducts levels on these patients, and can you get  
21 them for me, because I'm about to write a report that  
22 says some of these patients don't even have  
23 acetaminophen toxicity.

24 Now, it's important to understand what  
25 these adduct levels -- because I suspect you're going

1 to hear from Mr. Cohen about what these adduct levels  
2 show and what they don't show.

3 If you go back to the chart that I  
4 provided to you about the publications of the various  
5 experts in this case, you will learn that plaintiffs'  
6 experts and Dr. Lee and Dr. Larson have published on  
7 acetaminophen adducts. They are the primary  
8 publishers of this issue -- on this issue and what  
9 they mean.

10 Defendants' experts have not published a  
11 single article or have ever given a talk, to my  
12 knowledge, about acetaminophen -- acetaminophen  
13 adducts.

14 Dr. Lee testified in his deposition --  
15 and it was very clear -- that the presence of adducts  
16 only shows you that there is acetaminophen toxicity.  
17 It tells you nothing about how much -- how -- the  
18 dose that the patient took. I suspect you're going  
19 to hear Mr. Cohen get up and say, oh, by the way,  
20 these high adducts correlate with high dose. They  
21 don't.

22 The other thing, interestingly, that --  
23 that these experts say -- point out is, well, why  
24 didn't the defendant ask about genetic polymorphisms?  
25 As you see from Dr. -- Dr. Lee's declaration, many of

1 these same patients were subject to genetic testing  
2 to see whether there were common -- common genetic  
3 features which would explain why patients developed  
4 acute liver failure at low doses.

5 And, lo and behold, in a patient called  
6 Kort (ph), patients -- they studied 6 grams or less,  
7 but -- but the 4-gram patients were in that group --  
8 showed a common genetic polymorphism which would  
9 explain -- which would help to explain why some  
10 people get risk and the other people don't.

11 The fact that McNeil's experts never  
12 sought that data or -- and, as experts, didn't even  
13 care to ask for it says a lot about the analysis  
14 that's before you.

15 They failed to consider the fact -- and  
16 this is something that Dr. Flamm didn't realize until  
17 Dr. Lee pointed it out to him, that one of the  
18 low-dose cases was actually confirmed by his site and  
19 that Dr. Flamm confirmed the dose.

20 They failed in their reports to discuss  
21 that which they had made a big deal previously, that  
22 it didn't exist, that there was no patient in any  
23 United States hospital that ever got acetaminophen  
24 under the supervision of a doctor who got acute liver  
25 failure at 4 grams or less. There was such a case in

1 these 19.

2 So against the backdrop, not only must  
3 you consider what the acute liver failure authors  
4 say, you have to consider the source of an -- not  
5 only -- the quality of the expert reports that are  
6 put before you to challenge that.

7 So the court will have to decide in this  
8 Daubert hearing not only whether the Daubert  
9 challenge has a basis and (sic) whether, ultimately,  
10 any of the data that you hear in this case goes to --  
11 to the jury.

12 So with that as a background, I'm now  
13 going to shift a little bit to talk about the big  
14 picture, the big picture of where -- defendants'  
15 analysis of the Acute Liver Failure Study Group  
16 article and the article itself, what it says, and  
17 whether it even makes a difference.

18 First of all, I'd like to point out that  
19 under Daubert, peer review is not necessary, but when  
20 it exists, it's a very important indicia of  
21 reliability. The reliability is even higher, and the  
22 courts presume it's even higher, when the study is  
23 done independent of and prior to litigation. And  
24 it's at its highest when regulatory authorities like  
25 the FDA or the NIH rely on the study.

1                   And even though I couldn't find a case  
2     that says what I'm about to say, I would submit that  
3     the reliability is even higher when the study is not  
4     only relied on by the FDA and the federal government  
5     but is funded by it and is peer-reviewed by it.

6                   And I will emphasize that Dr. Robuck  
7     indicated that this study was submitted to the FDA  
8     prior -- was submitted to the National Institutes of  
9     Health prior to it being published, and nobody said,  
10    you know, I'd like to see the methodology for these  
11    low-dose cases. Nobody said, you know, this doesn't  
12    make any sense; we'd like to see the -- the case  
13    report forms. Nobody said that this -- this doesn't  
14    jive with the medical and scientific literature that  
15    is already out there in the medical community.

16                   I'd like to point out that no -- no  
17    questions were ever raised until this past six months  
18    on this study, not the NIH, not the FDA, not the  
19    Journal of Hepatology; importantly, not Dr. Brown,  
20    not Dr. Flamm, who were part of the Acute Liver  
21    Failure Study Group and could have done so at any  
22    time.

23                   Nobody suggested that they do this  
24    so-called body burden calculation that they -- that's  
25    woven throughout all their reports and we'll talk

1 about in a moment.

2 Yet they claim that this process was  
3 flawed, and their experts never sought to explore the  
4 process.

5 Now, I really want to talk about  
6 Dr. Brown, why this is so -- why what's going on in  
7 this courtroom has not played out in the medical and  
8 scientific community, and I'm going to give you two  
9 examples.

10 In tab 3 of your binder is a series of  
11 emails that were produced in Dr. Davern's deposition,  
12 and they're ones that the court has not yet seen but  
13 I think is telling and illustrates as to what a farce  
14 this proceeding has become.

15 In your binder, Dr. Brown was asked --  
16 as you recall from the papers that we filed,  
17 Dr. Brown was asked to resign from the Acute Liver  
18 Failure Study Group in the mid-2000s because of his  
19 inattention to the group, his failure to enroll  
20 cases, his failure to employ the proper paperwork.

21 Nevertheless, because he had been -- and  
22 this is before any of this issue came up. Before he  
23 had been an -- because he had been an investigator in  
24 the past, Dr. Lee, on behalf of the Acute Liver  
25 Failure Study Group, asked Dr. Brown to participate

1 in a new study, a five-year retrospective analysis of  
2 Acute Liver Failure Study Group cases.

3 That happened in 2015, while acting as  
4 McNeil's expert. And you'll see that there are two  
5 emails there. There's one in 2016 and 2015.

6 Importantly, this publication included a  
7 subanalysis of over a hundred acetaminophen-induced  
8 acute liver failure study groups in the Acute Liver  
9 Failure Group registry.

10 You will see in there a March 29, 2016  
11 email from Dr. Brown, two months to the day after he  
12 filed his expert report in this courtroom, saying  
13 that the Acute Liver Failure Study Group doesn't know  
14 how to analyze an acute -- doesn't know how to look  
15 at a case of acute liver failure, doesn't know how  
16 to -- you know is sloppy in its analysis of acute  
17 liver failure related to acetaminophen, and he puts  
18 his name on a paper that is going to be published --  
19 or has been published relating to the analysis of  
20 Acute Liver Failure Study Group and acetaminophen.  
21 It doesn't talk about dose issues, but it talks about  
22 the first two issues we talked about before.

23 Because if you recall, Your Honor,  
24 before, the initial report of Dr. Brown is, these  
25 patients don't even have acute liver failure, and if

1 they have acute liver failure, it's probably not due  
2 to acetaminophen.

3 Yet Dr. Brown, outside the courtroom, is  
4 putting his name to an article by the Acute Liver  
5 Failure Study Group as now marching into this court  
6 saying that these guys don't know how to do anything,  
7 and they're unreliable.

8 Now, if you take away anything from the  
9 Daubert -- from the Daubert standard, it's that  
10 experts are supposed to employ the very same  
11 methodology in the courtroom that they apply in their  
12 daily life as a scientist and as a doctor. I  
13 question whether or not Dr. Brown meets that  
14 standard.

15 I'll bring another point --

16 THE COURT: Mr. Tisi, in this tab,  
17 there's a March 29, 2016 email. It looks to be from  
18 Dr. Brown. He says, I added my comments. Are those  
19 comments then on the attached text?

20 MR. TISI: Yes, they are -- they are --  
21 they are on the attached.

22 THE COURT: Okay.

23 MR. TISI: In other words, he's --  
24 he's -- he's giving approval to the study and not  
25 saying -- you know, in that email, there's nothing

1 that says, you know, wait a second; I've just been  
2 involved in a proceeding and I wrote a report two  
3 months earlier where we have a real problem with --  
4 with -- with the Acute Liver Failure Study Group's  
5 methodology; I'd like to see the case report forms.

6                   You would think -- I mean, if I was --  
7 if I had a law clerk who wrote a bad memo for me  
8 on -- on January 30th and I get a new memo on the  
9 same topic on March -- on March 30th, I'd say, I'd  
10 really like to see the data upon which you -- which  
11 you rely. Dr. Brown didn't do that.

12                   I'm going to give you another example as  
13 to why this is a -- a difficult argument for the  
14 defendants to make. Exhibit Number 21 to our motion  
15 is case 12. It's patient 010, which is Dr. Flamm's  
16 patient.

17                   In his January 29th report, Dr. Flamm  
18 analyzed the 19 cases. It included an analysis of  
19 patient 12. In his report, he said the cause should  
20 not be listed as acetaminophen and that the dose is  
21 unreliable. And, further, he said it would be  
22 unreliable for anyone -- anyone on -- any reasonable  
23 scientist to describe this as a low-dose case.

24                   But unbeknownst to Dr. Flamm when he  
25 wrote his report and as described in Dr. Lee's

1 declaration at page 10, 11 and page 34 and 37, this  
2 was a report -- this was a report of a case out of  
3 Dr. Flamm's -- out of Dr. Flamm's site. His site  
4 contributed the case.

5 His site, and maybe even him, said it  
6 was acetaminophen-induced liver failure. His site  
7 described a biopsy as consistent with drug-induced  
8 liver disease. And as we learned, as you see as  
9 attached to Exhibit 7 to his -- to Dr. Lee's  
10 declaration, Dr. Flamm himself confirmed the dose as  
11 less than 4 grams.

12 Now, you saw Mr. -- Mr. Cohen -- I -- I  
13 thought it was interesting that Mr. Cohen brought up  
14 the important parts of this form, and I -- and I wish  
15 I could ask him to bring up that part. And he said  
16 there was several -- I don't know if you'll recall  
17 that he said there was several important parts of the  
18 form I want you to focus on.

19 I thought it was interesting that one  
20 part of the form he didn't focus on -- and all of  
21 these reports --

22 And if I can -- I only have one copy,  
23 and if I can, I will give you my copy of Dr. Flamm's  
24 report. May I approach, Your Honor?

25 THE COURT: Yes.

1 MR. TISI: This is Exhibit 12 out of the  
2 binder. And if I could argue from this for a moment  
3 because I only have one copy?

4 THE COURT: Sure.

5 MR. TISI: You will notice that there is  
6 a -- it has two forms. Each of these consist of two  
7 forms. There's an admission to the study form and an  
8 outcome form. One is filled when the patient is  
9 enrolled, and the other one is admitted when -- after  
10 the patient is analyzed.

11 And there is a section -- give me --  
12 bear with me a moment.

13 I'll have to find it, Your Honor. It's  
14 the final diagnosis of a patient. I have another  
15 form here (indiscernible).

16 THE COURT: Thanks.

17 MR. TISI: It's where the medical doctor  
18 indicates what the -- what the final diagnosis of the  
19 patient is, and it indicates on this case that the  
20 patient -- it's a little box, and they fill it in.  
21 It says, acetaminophen. It doesn't say  
22 indeterminate. It doesn't say idiopathic. Their  
23 site, Dr. Flamm's site, said this was  
24 acetaminophen-related.

25 And, of course, we also know that

1 they -- that the -- that in realtime, in real  
2 science, Dr. Flamm and his colleagues were correct.

3 How do we know that? Well, we know that  
4 because if you go to table 1 of Dr. Lee's  
5 declaration, this patient was adduct-positive. The  
6 patient had the presence of acetaminophen adducts.

7 So Dr. Flamm -- and the reason for me  
8 bringing you -- bringing this up to you is that  
9 Dr. Flamm, in his litigation report, says, there's no  
10 way that this could possibly be acute liver failure  
11 due to acetaminophen; nobody would ever say that; the  
12 dose is unreliable, and we come to learn that his  
13 site made the conclusion that it was acetaminophen,  
14 we know the adducts were positive, and Dr. Flamm  
15 confirmed the dose.

16 So let's talk about the issues in the  
17 case. First of all, defendants filed on Friday issue  
18 one; should you strike the declaration of Dr. Lee?  
19 That issue wasn't raised by Mr. Cohen. If -- do you  
20 want me to find that portion of the -- of the -- of  
21 that form? Would that help?

22 Okay. Number one, should you strike the  
23 declaration of Dr. Lee? McNeil filed a motion last  
24 Friday to strike the Lee declaration. We filed our  
25 opposition yesterday. I just want to discuss it very

1 briefly --

2 THE COURT: Okay.

3 MR. TISI: -- because I think it is  
4 important.

5 Respectfully, it is a bizarre request.

6 The law encourages lawyers such as myself to  
7 thoroughly investigate and do exactly what I did.  
8 When we had the motion that was filed, we contacted  
9 the lawyers for Dr. Lee. We sent Dr. Lee, through  
10 his counsel, the reports of Drs. Brown, Flamm, and  
11 Brent (ph) and the -- and the -- and the motion that  
12 was filed on behalf of Dr. -- on behalf of McNeil.

13 They were read by Dr. Lee before I ever  
14 had a chance to meet with him. I met with him in  
15 mid-February. He did most of the talking. He -- he  
16 gave us the information. We took the information  
17 down. We turned around a declaration. We sent it to  
18 his lawyers. Drafts went back and forth, and he  
19 signed the -- he signed it.

20 I will point out that McNeil did exactly  
21 the same thing with the declaration that it provided  
22 in January. It drafted the report. It drafted the  
23 declarations, sent it to the lawyers, had it signed,  
24 and it was submitted to the court.

25 So I would argue that the motion they

1 filed on Friday is not only frivolous but is designed  
2 to get the court not to look at the substance of it.

3 There are, however, two corrections that  
4 Dr. Lee made in his deposition, so I -- I want to  
5 call it to the court's attention.

6 In paragraph 14, he used the word  
7 "median" instead of "mean" when describing the median  
8 dose being 7.5 grams in the Larson study.

9 The second is paragraph 41, which was  
10 left in by accident. He testified to that.

11 As to the remainder of the 48-page,  
12 single-spaced declaration, it remains his opinion as  
13 of today.

14 Issue number two; does the fact that  
15 there is 17 reported cases, and if there are 16 or 17  
16 or 18 cases that remain after the reanalysis, based  
17 upon what we now know, does it make a difference?

18 It really doesn't. The point in  
19 describing the low-dose cases was not to give a  
20 conclusion as to causation but to describe the  
21 low-dose phenomenon in the Acute Liver Failure Study  
22 Group data. It's a descriptive paper. It fits into  
23 all of the other articles that are out there in the  
24 peer-reviewed public's literature.

25 There is a statement in the article that

1 indicates -- that they can use at trial that says  
2 some of the patients can have a difficulty giving  
3 medical history -- giving dosing history. But some  
4 don't.

5 But there are also reasons why some of  
6 the patients in this -- in the dosing -- in this  
7 group are reliable. One would be case number 9,  
8 that's described in Dr. Lee's declaration, ending in  
9 also 010.

10 And -- and I just want to be clear,  
11 there are -- even though we can't use the prefix for  
12 these studies under the agreement with the Acute  
13 Liver Failure Study Group -- they're giving patient  
14 identifying information -- and -- and just  
15 coincidentally, the case that Dr. Flamm has, which is  
16 case number 12, ends in 010. Case number 9 from  
17 another institution ends in 010. They're two  
18 different cases, just so that -- it may be confusing,  
19 but -- but you can see that there.

20 THE COURT: I see it.

21 MR. TISI: That case is a case -- as I  
22 indicated, is a hospitalization case where the  
23 patient got 12.5 grams over five days. If the  
24 patient was -- was being given acetaminophen in a  
25 hospital setting, they would have gotten no more than

1 4 grams a day, which fits exactly the pattern of  
2 being in the hospital for five days.

3 So what remains after this study is, if  
4 you substituted the -- the -- the number 17 or 16 for  
5 19 -- is, you still have a description of acute liver  
6 failure with patients who took 4 grams or less.

7 It is not what the defendants came  
8 marching into court with in January, which is, not a  
9 single one of these patients are reliable; not a  
10 single one -- most of these patients don't even have  
11 acute liver failure or acetaminophen-induced liver  
12 disease. That argument is, apparently, out the  
13 window because of the adducts testing.

14 So now they're focused on a handful of  
15 cases, and the question is, does it make a  
16 difference? I question -- and I raise this because  
17 if the study had written, for the purposes of the  
18 jury and purposes of reliability -- if the jury had  
19 heard that there was 17 cases or 16 cases of acute  
20 liver failure at less than or equal to 4 grams,  
21 the -- the -- the observation would be exactly the  
22 same.

23 Now, I want to go to number three, a  
24 third issue; what do the acetaminophen adducts show?  
25 Now, in the reports, McNeil's experts, as -- as we

1 had indicated, indicate not only was the dose  
2 unreliable, but these patients don't even have acute  
3 liver failure. I think -- as I indicated, I think  
4 that's kind of out the window now.

5 Table 1 of the Lee declaration on  
6 page 15 indicates that for the acetaminophen patients  
7 who were tested, 18 of them, 18 of the 19, 16 were  
8 adduct-positive. One of those patients was tested  
9 too long after the patient had been exposed, so the  
10 adduct test would be unreliable. So that there was  
11 only one patient, which happens to be the Macrobid  
12 case that Mr. Cohen talked to you about, that was --  
13 should not be included.

14 While these -- while this test is not  
15 commercially available, they are the smoking gun to  
16 show acetaminophen was a cause of acute liver failure  
17 in these patients, but this shows nothing about dose.

18 It shows that the Acute Liver Failure  
19 Study Group investigators were largely right in their  
20 non-litigation study, and McNeil experts were mostly  
21 wrong in their litigation reports.

22 That is a really important point here,  
23 Your Honor. They came marching in here in January  
24 saying -- saying that, based upon their -- their post  
25 hoc analysis of these cases, that these cases weren't

1 even acute liver failure or related to acetaminophen.

2           The acute liver failure -- and it  
3 indicates why there is an indicia of reliability  
4 accorded to studies like this and a skepticism of  
5 post-study analysis like that done by the Acute --  
6 by -- by McNeil's experts.

7           THE COURT: Let's wrap it up, Mr. Tisi.

8           MR. TISI: Okay. In your binder, there  
9 is a -- there is a quote from Dr. Lee on page 21, and  
10 I asked him, if anyone were to stand up in court and  
11 say the presence of acetaminophen adducts tells you  
12 anything about dose, would that be true? The answer  
13 is no.

14           Let's talk about this half life issue  
15 because it involves our -- our request that these  
16 experts be struck.

17           In their reports, McNeil's reports rely  
18 on a formula, and the formula is basically this:  
19 Measure the acetaminophen in the person's body at the  
20 time that the person presents; look at their blood;  
21 assume a half life of that patient; calculate  
22 backwards; and through this, you can calculate and  
23 demonstrate that the dosing history given by the  
24 patient is incorrect .

25           The problem with that -- that -- that

1 hypothetical calculation is -- is several. Number  
2 one, it doesn't -- it doesn't describe the phenomenon  
3 that as a patient is in acute liver failure, they  
4 continue to -- and if they're taking acetaminophen,  
5 it continues to accumulate in the liver. It's not  
6 excreted. So it gives a high level -- an  
7 inappropriately high level.

8 It is also important to note that not  
9 only does the plaintiffs' experts -- not only does  
10 Dr. Lee and Dr. Larson -- but defendants' own experts  
11 agree that that test has never been validated in a --  
12 in a situation involving acetaminophen.

13 So, for example, Dr. Flamm, as indicated  
14 in his deposition on page 107 and 108 --

15 Well, we asked this of Dr. Brent (ph).  
16 From your bibliography, are there any articles that  
17 this estimated body burden -- the way you did it in  
18 your supplemental report? And the answer, from  
19 acetaminophen? Yes. No.

20 We asked Dr. Flamm, there is -- question  
21 on page 286: There is no study that says --  
22 question: Is there a study that says that if we  
23 combine body burden with an estimated half life, we  
24 can determine whether a dose reported in a patient in  
25 a chronic dosing situation is accurate; that has

1 never been proven or attempted to be proven, true?

2 Answer: There is no such study.

3 Dr. Lee agrees. Dr. Kaplowitz agrees.

4 Dr. Davern agrees. Everybody agrees that this is not  
5 a formula that has ever been validated in the realm  
6 of science in any study that will demonstrate the --  
7 that -- that dose.

8 And I would point out that Dr. Brown,  
9 Dr. Flamm has never recommended that the -- that the  
10 Acute Liver Failure Study Group employ such a -- such  
11 a thing.

12 And I would also point out, in reality,  
13 that the FDA has been struggling with the issue of  
14 confirming dose for 15 years. You would think that  
15 in that time, McNeil would have come forward and  
16 said, you know something; FDA, we found the Holy  
17 Grail; we have a -- we have a -- a formula that all  
18 you have to do is plug in a couple numbers, and we  
19 can demonstrate that all this concern about low-dose  
20 ingestion and margin of safety is a bunch of -- is a  
21 bunch of hooey.

22 They never did that, but they march into  
23 court and put a declaration before Your Honor, put  
24 a -- put a -- put a -- a report before Your Honor  
25 that says -- that says that they've never published

1 on it, and we're supposed to -- we're supposed to  
2 allow them to present that under the guise of  
3 science.

4 So we would ask not only that that be  
5 struck as unreliable and -- and -- and contravening  
6 Mr. -- Dr. Lee and -- and everybody else, but their  
7 experts be struck -- struck on that.

8 The truth is this, Your Honor, and --  
9 and -- and -- and it is difficult, and this I agree  
10 with Mr. Cohen on. It's difficult to discuss each  
11 and every one of these cases.

12 But I did ask Dr. -- I did go through  
13 these -- these cases on Friday with Dr. Larson, and I  
14 said, Dr. Larson, we can't go through each one of  
15 these individually, but let's -- let me ask you this  
16 as a -- as a --

17 And I can provide you with this  
18 testimony. And I did this with Dr. Lee as well.

19 -- let me ask you in the spectrum, are  
20 there cases in the 19 in which the dosing history was  
21 more challenging? Yes. Are there cases within the  
22 19 where the dosing history was less challenging?  
23 Yes. Is that to be expected? Yes, it's to be  
24 expected because patients -- because doctors  
25 sometimes find that patients can give accurate

1 histories, and sometimes they don't, but we accepted  
2 the patients' history, and we described what we saw.  
3 Does that mean that there's not contradictory  
4 information for some of them? Of course, there is.  
5 But does that mean that the results of the study  
6 is -- are wrong as reported? Of course not.

7           The defendant has a lot of arguments  
8 that it can make at trial that dosing history is  
9 sometimes difficult. I expect that that's going to  
10 be a major thrust of their -- of their argument.

11           That has never been in dispute. Dr. --  
12 Dr. Lee and Dr. Larson include that -- admit that  
13 freely. It's in their declaration. It's -- it's  
14 throughout the medical literature.

15           Does that mean dosing history is  
16 unreliable? Sometimes it may be; sometimes it may  
17 not be. They were reporting what they saw. And  
18 that's what this paper is about, and that's why it's  
19 an important paper. It fits in the -- in the  
20 spectrum of cases out there.

21           I'm going to wrap up now. We've talked  
22 about -- I just wanted to wrap in here that we have a  
23 challenge to the defendants' experts. I think they  
24 went out way on a limb, way beyond where an expert  
25 ought to be. They became advocates in this case, and

1 I believe that they -- that they should be struck for  
2 the reasons in our motion.

3 I would point out, Your Honor, that  
4 sometimes enough is enough. We've been through this  
5 for about a year and a half. We've argued every  
6 single issue that you could possibly have. This is  
7 the time to put an end to this constant wrangling  
8 about what the data mean and allow the parties to put  
9 their evidence, put their proofs before a jury, and  
10 the Larson paper's one of them.

11 Thank you very much.

12 THE COURT: Thank you, Mr. Tisi.

13 All right. We're going to break.

14 Do you have something else you want to  
15 argue Mr. Cohen?

16 MR. COHEN: I wanted to respond. Two  
17 minutes.

18 THE COURT: All right. You have two  
19 minutes.

20 MR. COHEN: Thank you, Your Honor, very  
21 much.

22 You know, there's an old -- a movie  
23 about handling the truth. Well, I'm going to say  
24 that about the dose. This is all about dose, and the  
25 plaintiffs can't handle the dose.

1                   The adduct data, as Mr. Tisi correctly  
2   said, does not establish that these are low-dose  
3   cases. Their own experts all admitted that. Dr. Lee  
4   admitted that. Dr. Larson admitted that. All of  
5   their experts have admitted that. The low -- the  
6   high adduct data does not establish that any of these  
7   cases occurred at low dose.

8                   And it gets worse, Your Honor. Do you  
9   remember the movie "A Christmas Story," where the  
10  mother says, Ralphie, you're not going to get that BB  
11  gun for Christmas because you're going to shoot your  
12  eye out?

13                  I think this gun has misfired. If we  
14  could put up (indiscernible), the 2011 study  
15  published by the ALFSG with Dr. Larson as a coauthor,  
16  Dr. Lee as the primary author, here's what it says:  
17  1.0 nanomoles of adducts indicate a definite  
18  acetaminophen overdose.

19                  They didn't put that in the declarations  
20  they submitted, and then they learned this at our  
21  expert's depositions that, oh -- oh, my God; the gun  
22  misfired. The smoking gun we just heard about, it  
23  misfired. All their adduct levels are between 3 and  
24  41 nanomoles per milliliter.

25                  I invite you to look at the very table

1 Mr. Tisi just put before you. They wrote that, and  
2 they published that. And that's the Acute Liver  
3 Failure Study Group, and that is why the adduct data  
4 now, we're being told, doesn't establish dose. Oh.  
5 Oops. It establishes overdose. They don't want you  
6 to know that.

7 THE COURT: And do I have that article?

8 MR. COHEN: May I approach?

9 THE COURT: Thank you. Thank you.

10 MR. COHEN: One last thing. They --  
11 they talked a lot about Dr. Brown. They brought your  
12 attention to Dr. Brown's emails. They were offered  
13 Dr. Brown's deposition. They declined. Dr. Brown's  
14 not here to explain his emails. I would ask the  
15 court not to consider that evidence as -- as anything  
16 other than hearsay and unrelated.

17 Finally, Mr. Tisi talked about  
18 polymorphism. Dr. Lee testified that his papers on  
19 genetic testing contain no data about 4 grams or less  
20 ingestion of acetaminophen at page 322 of his  
21 deposition, lines 3 through 7; we didn't discuss the  
22 quantities in the papers -- two papers.

23 Finally, Your Honor, it is a problem,  
24 the methodology used for a study that the plaintiffs'  
25 experts are relying on, and it's a bigger problem

1 when the authors of that paper actually excluded the  
2 cases in 2009 and didn't tell the scientific  
3 community and didn't tell this court.

4 Thank you.

5 THE COURT: Thank you, Mr. Cohen.

6 Mr. Tisi, you may have your case report  
7 back.

8 MR. TISI: Okay.

9 THE COURT: Thank you very much --

10 MR. TISI: Can I make one --

11 THE COURT: -- for your written  
12 submissions.

13 MR. TISI: Can I make one point about  
14 this case report, Your Honor, because I think it  
15 is -- it is -- Mr. -- Mr. -- with your indulgence,  
16 about 30 seconds?

17 THE COURT: Okay.

18 MR. TISI: I asked -- and it's in your  
19 binder -- about this adduct issue of the -- this --  
20 this backfiring smoking gun issue. Every single  
21 witness said, it measures toxicity; it doesn't  
22 measure dose.

23 But to illustrate that point, I would go  
24 to the case 010, which is number 12.

25 THE COURT: Um-hmm.

1                   MR. TISI: And that case, as we know, is  
2 a 4-gram case because it was in a hospital. That  
3 patient had a -- a 9. And if that patient had a 9  
4 adduct level, it does -- it would demonstrate that  
5 patient had a normal dose and had a 9. That  
6 demonstrates that -- that this measures toxicity but  
7 doesn't measure dose, as Mr. Cohen just told you.

8                   Thank you very much, Your Honor.

9                   THE COURT: Thank you.

10                  MR. COHEN: Your Honor, one housekeeping  
11 matter?

12                  THE COURT: Yes.

13                  MR. TISI: We do have the graphics  
14 printed out.

15                  THE COURT: Okay.

16                  MR. COHEN: Do you just want a set?

17                  INDISCERNIBLE SPEAKER: Could I have a  
18 set?

19                  MR. COHEN: Yes.

20                  INDISCERNIBLE SPEAKER: Thank you.

21                  THE COURT: Could I see Ms. Jones and  
22 Mr. Tisi for just a moment back in chambers?

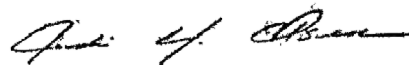

23                  ESR OPERATOR: All rise.

24                  (Whereupon, the proceeding was concluded  
25 at 12:23 p.m.)

C E R T I F I C A T I O N

I, Judi Y. Olsen, Registered  
Professional Reporter, do hereby certify that the  
foregoing is a true and correct transcript from the  
electronic sound recordings of the proceedings in the  
above-captioned matter.
